Graded Assignment • 1h

Due Jul 18, 11:59 PM IST

Your grade: 89%

Your latest: **89%** • Your highest: **89%** • To pass you need at least 80%. We keep your highest score.

1. Which of the following services is NOT offered by OpenAI? 1 / 1 point

- ○ OpenAI Codex
- ○ OpenAI ChatGPT
- ○ OpenAI DALL-E
- ◉ OpenAI Translate

Correct
Correct! OpenAI Translate is not a service offered by OpenAI. However, OpenAI's models like GPT-3 can perform translation tasks.

2. Which of the following steps are involved in using LangChain to retrieve accurate answers from LLMs? 1 / 1 point

- ☐ Train LangChain models on proprietary datasets.
- ☑ Configure LangChain to use specific query parameters.

Correct
Correct! Configuring LangChain to use appropriate query parameters enhances the accuracy of answers retrieved from LLMs.

- ☑ Evaluate the retrieved answers for accuracy and relevance.

Correct
Correct! Evaluating the responses for accuracy and relevance ensures that the answers provided by LangChain are reliable.

- ☐ Utilize LangChain's built-in data cleaning features.
- ☑ Integrate LangChain with the LLMs.

Correct
Correct! Integrating LangChain with LLMs is a crucial first step in leveraging their capabilities.

3. Which of the following steps are essential for setting up an environment to use an OpenAI model in a project? 0.8 / 1 point

- ☐ Developing a custom machine learning model from scratch.
- ☑ Writing boilerplate code for the application.

Correct
Correct! Boilerplate code is necessary to provide a structural foundation for the project.

- ☑ Adding the required files for the application.

Correct
Correct! Ensuring all necessary files are in place is crucial for the application's functionality.

- ☐ Creating a new space for the project.
- ☐ Installing a cloud-based database service.

You didn't select all the correct answers

4. Which of the following are required steps to implement a conversational AI application using Streamlit and ChatGPT? 0.8 / 1 point

- ☐ Install the langchain library
- ☐ Create an API for database interaction
- ☐ Develop a user interface using HTML/CSS
- ☑ Install the Streamlit library

Correct
Correct! Installing the Streamlit library is a crucial step for building applications with it.

- ☑ Use the OpenAI API

Correct
Yes, using the OpenAI API is essential for integrating ChatGPT into your application.

You didn't select all the correct answers

5. What is the primary purpose of word embeddings in natural language processing (NLP)? 1 / 1 point

- ○ To create visual representations of words
- ○ To translate text from one language to another
- ○ To analyze the frequency of words in a text
- ◉ To convert words or sentences into numerical representations

Correct
Correct! Word embeddings are used to convert textual data into numerical representations, which can be used in various NLP tasks.

6. Which of the following are components of prompts in LangChain? 0.6 / 1 point

- ☐ Model trainers
- ☐ Example selectors
- ☑ Prompt templates

Correct
Correct! Prompt templates are a fundamental component of prompts in LangChain.

- ☑ Data loaders

This should not be selected
Incorrect. Data loaders are not considered components of prompts. Revisit the lesson on prompt components.

- ☑ Output parsers

Correct
Correct! Output parsers help in interpreting the model's response.

7. Identify the tasks that can be achieved using the Streamlit library when building a user interface. 1 / 1 point

- ☑ Creating interactive widgets like sliders and buttons

Correct
Correct! Streamlit allows you to create interactive widgets such as sliders and buttons.

- ☐ Implementing back-end server logic
- ☐ Setting up database connections
- ☑ Displaying media content like images and videos

Correct
Correct! Streamlit can display media content such as images and videos easily.

- ☑ Handling real-time data visualization

Correct
Correct! Streamlit can handle real-time data visualization effectively.

8. Which type of memory in LangChain helps in reducing the number of tokens used by summarizing previous conversations? 1 / 1 point

- ○ Conversation buffer window memory
- ◉ Conversation summary memory
- ○ Contextual memory
- ○ Stateless memory

Correct
Correct! Conversation summary memory helps in reducing token count by summarizing previous interactions. Great job!

9. Which of the following steps is essential for setting up and implementing an application using Visual Studio Code? 1 point

- ◉ Creating a new project directory
- ○ Installing necessary extensions
- ○ Setting environment variables
- ○ Writing JavaScript code

Incorrect
Creating a new project directory is important, but it is not the only step in setting up an application using Visual Studio Code.

10. Which of the following steps are involved in the process of loading, transforming, and embedding data using LangChain? 1 / 1 point

- ☐ Storing the numerical representations in a traditional database
- ☑ Transforming the data into a suitable format

Correct
Correct! Transforming the data into a suitable format is necessary for further processing.

- ☑ Embedding the data into numerical representations

Correct
Correct! Embedding the data into numerical representations is the final step before storing it in vector stores.

- ☐ Encrypting the data before transformation
- ☐ Visualizing the data using graphs and charts
- ☑ Loading raw data from various sources

Correct
Correct! Loading raw data from various sources is a crucial first step in the process.

11. What is the primary purpose of storing document embeddings in a vector store when developing applications with LangChain? 1 / 1 point

- ○ To make documents searchable by keywords.
- ◉ To enable efficient retrieval of similar documents based on their semantic content.
- ○ To compress the document size and save storage space.
- ○ To convert documents into a format that can be easily displayed on a user interface.

Correct
Correct! Storing document embeddings in a vector store allows efficient retrieval of documents based on semantic similarity, which is crucial for many applications.

12. Which of the following are true about LangChain chains and their use cases? 0.6 / 1 point

- ☑ Simple sequential chains cannot be used in real-time applications.

This should not be selected
Incorrect. Simple sequential chains can indeed be used in real-time applications.

- ☐ LangChain chains are only useful for handling text-based data.
- ☐ Utility chains are specifically designed for tasks like model evaluation and logging.
- ☑ Generic chains can be used for a variety of tasks including data preprocessing and transformation.

Correct
Correct! Generic chains are versatile and can be used for multiple tasks including data preprocessing and transformation.

- ☑ Load summarize chain requires specific implementation steps and dependencies.

Correct
Correct! The load summarize chain has specific implementation steps and dependencies that need to be followed.

13. Which of the following is NOT a necessary library to include in the requirements.txt file for a LangChain project integrating with OpenAI? 1 / 1 point

- ◉ numpy
- ○ langchain
- ○ requests
- ○ openai

Correct
Correct! While numpy is a useful library for numerical operations, it is not required for integrating LangChain with OpenAI.

14. What are key components to include when designing a YouTube script writing tool using LangChain? 1 / 1 point

- ☑ Topic selection feature

Correct
Correct! Allowing the user to select a topic is essential for generating relevant scripts.

- ☑ Input functionality for API key

Correct
Correct! Inputting the API key is necessary for authenticating with external data sources.

- ☑ Video length specification

Correct
Correct! Specifying the video length helps tailor the script to fit the desired duration.

- ☐ Automated video editing
- ☐ Live streaming capability
- ☑ Creativity level adjustment

Correct
Correct! Adjusting creativity levels can help fine-tune the tone and style of the generated script.

15. Which of the following are steps involved in setting up a Pinecone index for an AI chatbot? 1 / 1 point

- ☐ Fetching real-time user input
- ☑ Setting up the environment

Correct
Correct! Setting up the environment is a necessary step before you can initialize and use a Pinecone index.

- ☐ Assigning values to constants
- ☑ Creating an embedding instance

Correct
Correct! Creating an embedding instance is a key step in setting up a Pinecone index.

- ☑ Pushing data to the vector store

Correct
Correct! Pushing data to the vector store is an essential step when working with Pinecone.

16. Which of the following steps is essential for creating a model to assign tasks, including data preprocessing, model training, and saving the model for future use? 1 / 1 point

- ○ Ignoring data anomalies and outliers
- ◉ Collecting and preprocessing the dataset
- ○ Skipping the model validation step
- ○ Only using a small subset of the available data

Correct
Correct! Collecting and preprocessing the dataset is a critical initial step to ensure the model is built on clean and relevant data.

17. Which of the following is an essential step in implementing an HR resume screening assistance tool? 1 / 1 point

- ○ Implementing a sentiment analysis algorithm
- ○ Designing the user interface with aesthetic considerations
- ○ Creating a unique ID for each job description
- ◉ Establishing connections with a database like Pinecone for document retrieval

Correct
Correct! Establishing connections with a database like Pinecone is crucial for retrieving relevant documents based on user input.

18. Which of the following are steps involved in implementing an invoice extraction bot using LangChain and LLM? 1 / 1 point

- ☑ Displaying extracted data in a table format

Correct
Correct! Displaying the extracted data in a table format is an important step to visualize the results.

- ☐ Cleaning data using OpenCV
- ☑ Uploading invoice files to the system

Correct
Correct! Uploading invoice files is a crucial step in the process.

- ☐ Generating random invoice data for testing
- ☑ Extracting data using regular expressions

Correct
Correct! Regular expressions are often used to extract specific patterns from text in the invoices.

19. What is the primary role of the Hugging Face pipeline in a Natural Language Processing (NLP) project? 1 / 1 point

- ◉ To streamline the process of building, training, and deploying models
- ○ To develop frontend interfaces for AI applications
- ○ To create visualizations for data analysis
- ○ To manage database connections and optimize queries

Correct
Correct! A Hugging Face pipeline helps in simplifying the steps involved in building, training, and deploying NLP models.

20. Which of the following steps is essential in setting up the environment for automating the summarization of customer care call recordings? 1 / 1 point

- ◉ Importing the whisper library and setting up OpenAI and Zapier APIs
- ○ Configuring the email server settings
- ○ Creating a user interface for customer feedback
- ○ Recording customer care calls in MP3 format

Correct
Correct! Importing the whisper library and setting up the necessary APIs are crucial steps in setting up the environment for automated summarization.
