**Module 1**
Graded Assignment • 30 min

Due Nov 6, 11:59 PM IST

## Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 70%. We keep your highest score.

**1.** Which of the following is not a suffix of CATATTAC? 1 / 1 point

Nice work

**2.** What's the longest prefix of CACACTGCACAC that is also a suffix? 1 / 1 point

Nice work

**3.** Which of the following is not a substring of GCTCAGCGGGGCA? 1 / 1 point

Nice work

**4.** Starting around 2007, the cost of DNA sequencing started to decrease rapidly because more laboratories started to use: 1 / 1 point

Nice work

**5.** Which of the following pieces of information is not included in a sequencing read in the FASTQ format: 1 / 1 point

Nice work

**6.** If read alignment is like "looking for a needle in a haystack," then the "haystack" is the: 1 / 1 point

Nice work

**7.** The Human Genome Project built the initial "draft" sequence of the human genome, starting from sequencing reads. The computational problem they had to solve was the: 1 / 1 point

Nice work

**8.** If the length of the pattern is x and the length of the text is y, the minimum possible number of character comparisons performed by the naive exact matching algorithm is: 1 / 1 point

Nice work

**9.** If the length of the pattern is x and the length of the text is y, the maximum possible number of character comparisons performed by the naive exact matching algorithm is: 1 / 1 point

Nice work

**10.** Say we have a function that generates a random DNA string, i.e. the kind of string we would get by rolling a 4-sided die (A/C/G/T) over and over. We use the function to generate a random pattern P of length 20 and a random text T of length 100. Now we run the naive exact matching algorithm to find matches of P within T. We expect the total number of character comparisons we perform to be closer to the... 1 / 1 point

Nice work
