

JupyterLab Select, Move and/or Merge Multiple Cells

Last updated on Feb 10, 2022

In this short article, you can find how to **select and move/delete/copy/delete multiple cells at once in JupyterLab**. This feature is available only in JupyterLab and not in Jupyter Notebook.

Step 1: Select Multiple Cells in JupyterLab

There are two ways to select multiple cells

1. Using Shift + mouse

- Select the first cell
- Select next one by pressing Shift and a mouse click on right of it
- Continue until the final cell
 - You can select the cells one by one
 - Select the first and last (including all between)

2. Using Shift + J

- Select the first cell
- Press Shift + J in order to select the one below

Step 2: JupyterLab Delete/Move/Copy Multiple Cells

Copying, merging or deleting of all selected cells is available from the menu (right mouse click):

Move

- Right mouse click with all selected cells
- Select **Cut Cells**
- Select new cell after which you like to move the cells
- Right click and **Paste Cells**

Delete

- Right mouse click with all selected cells
- Select **Cut Cells**

Merge

- Right mouse click with all selected cells
- Select **Merge Selected Cells**

Copy
