1. During debugging, which method in a Jupyter notebook helps in identifying the output of a neural network model for given inputs?

1 / 1 point

- ☒ predict
- ☐ fit
- ☐ compile
- ☐ train_on_batch

 **Correct**
Correct! The predict method helps in identifying the output for given inputs.

2. What are some strategies to reduce the volume of log data during GAN training?

1 / 1 point

- ☐ Increasing the learning rate
- ☒ Implementing log rotation
- ☐ Reducing the number of training epochs
- ☒ Logging only error rates at set intervals

 **Correct**
Correct! Log rotation helps manage log files by archiving old logs and keeping the volume manageable.

 **Correct**
Correct! Logging key metrics at set intervals can significantly reduce log volume while maintaining important information.

- ☒ Using conditional logging

 **Correct**
Correct! Conditional logging helps in printing only essential information, thereby reducing log volume.

3. Which of the following are important considerations when plotting a graph of recorded data points during GAN training?

1 / 1 point

- ☐ Using a high-resolution display
- ☒ Labeling axes clearly

 **Correct**
Correct! Clear axis labels are crucial for understanding what the graph represents.

- ☒ Choosing appropriate scales for the axes

 **Correct**
Correct! Appropriate scales ensure the graph is readable and accurately represents the data.

- ☒ Ensuring data points are recorded at consistent intervals

 **Correct**
Correct! Consistency in recording intervals ensures the graph accurately reflects the training process.

- ☐ Including all intermediate iterations in the graph

4. What are the essential components to include in a function that plots accuracy and loss progress?

1 / 1 point

- ☒ Legend to differentiate between plots

 **Correct**
Correct! A legend is crucial to distinguish between multiple plots on the same graph.

- ☐ Code to save the graph as an image file
- ☐ Data normalization logic
- ☒ Labels for the x and y axes

 **Correct**
Correct! Labels help in understanding what the axes represent.

- ☒ Title for the graph

 **Correct**
Correct! A title provides context for what the graph is showing.

5. Which library is commonly used in Python for plotting graphs?

1 / 1 point

- ☒ matplotlib
- ☐ pandas
- ☐ numpy
- ☐ scipy

 **Correct**
Correct! Matplotlib is widely used for plotting in Python.
