1. What are some steps involved in preparing a Google Colab environment for training a GAN model?

1 / 1 point

- ☐ Configuring the network firewall settings.
- ☒ Mounting Google Drive to access datasets.

✔ **Correct**
Well done! Mounting Google Drive can be very useful for accessing datasets and saving model checkpoints.

- ☒ Installing necessary libraries like TensorFlow and PyTorch.

✔ **Correct**
Correct! Installing libraries like TensorFlow and PyTorch is essential for training GAN models.

- ☐ Setting up SSH keys for remote access.
- ☐ Allocating a virtual machine with adequate CPU.

2. When conducting SA training using Google Colab and GPU, what is one key advantage of utilizing the GPU?

1 / 1 point

- ☐ Reduced cost compared to using CPU.
- ☐ Better integration with Python libraries.
- ☐ Increased accuracy of the trained model.
- ☒ Faster computation speeds for training models.

✔ **Correct**
Correct! Utilizing a GPU significantly speeds up computation, which is crucial for training complex models like GANs.

3. Which of the following are characteristics of a DCGAN model?

1 / 1 point

- ☒ Utilizes a generator and discriminator

✔ **Correct**
Correct! DCGAN models consist of a generator and a discriminator.

- ☐ Applies recurrent neural networks
- ☐ Includes an encoder and decoder
- ☒ Employs batch normalization

✔ **Correct**
Correct! Batch normalization is commonly used in DCGAN models to stabilize training.

- ☒ Uses convolutional layers

✔ **Correct**
Correct! DCGAN models use convolutional layers to process images.

4. What is the primary purpose of using a deep convolutional GAN in generating fashion images?

1 / 1 point

- ☐ To reduce the size of the fashion dataset
- ☒ To generate high-quality synthetic fashion images
- ☐ To classify different types of fashion items
- ☐ To increase the resolution of existing fashion images

✔ **Correct**
Correct! Deep convolutional GANs are specifically designed to generate high-quality synthetic images, including fashion images.

5. Which of the following are essential steps in training a fashion dataset using a deep convolutional GAN?

1 / 1 point

- ☒ Randomly initializing the weights of the GAN

✔ **Correct**
Correct! Weight initialization is an essential step in setting up the GAN for training.

- ☐ Manually labeling each generated image

- ☒ Using a loss function to measure performance

✔ **Correct**
Correct! A loss function is needed to evaluate how well the GAN is performing.

- ☒ Preprocessing the fashion images

✔ **Correct**
Correct! Preprocessing is crucial to prepare the images for training the GAN.

- ☒ Optimizing the model using gradient descent

✔ **Correct**
Correct! Gradient descent is a fundamental optimization algorithm used to train the GAN.
