1. Which Keras model type would you use if you need to create a model with multiple inputs and outputs?

1 / 1 point

- ☐ Embedding model
- ☒ Functional model
- ☐ Sub-classing model
- ☐ Sequential model

✔ **Correct**
Correct! The Functional model in Keras allows for the creation of models with multiple inputs and outputs.

2. In the process of determining the probability of an image being real or fake, which activation function is commonly used in the output layer of the discriminator?

1 / 1 point

- ☐ Tanh
- ☐ Softmax
- ☐ ReLU
- ☒ Sigmoid

✔ **Correct**
Correct! The Sigmoid activation function is commonly used to output a probability between 0 and 1.

3. When creating a basic discriminator function using a sequential model, what is the primary purpose of the discriminator?

1 / 1 point

- ☒ To classify images as real or fake
- ☐ To generate new images
- ☐ To enhance image resolution
- ☐ To reduce the dimensionality of images

✔ **Correct**
Correct! The discriminator's main goal is to classify images as either real or fake.

4. When reshaping and flattening an input image for classification, what is the primary goal?

1 / 1 point

- ☐ To increase the number of features available for classification
- ☐ To reduce the dimensionality of the input data
- ☒ To transform the image into a format suitable for the neural network
- ☐ To normalize the pixel values of the input image

✔ **Correct**
Correct! Reshaping and flattening prepare the image for processing by the neural network.

5. Which steps are involved in creating a joint representation for classification in a CGAN?

0.8 / 1 point

- ☐ Performing a max-pooling operation to reduce spatial dimensions
- ☒ Combining the conditional label with the input image

✔ **Correct**
Correct! Combining the conditional label with the input image is essential for creating a joint representation.

- ☐ Normalizing the pixel values of the input image
- ☒ Using a fully connected layer to connect the features

✔ **Correct**
Correct! Fully connected layers help in forming a joint representation by connecting the features.

- ☐ Applying a convolutional layer to extract features
