1. What are some common uses of GANs in machine learning?

1 / 1 point

- ☐ Generating random noise vectors
- ☐ Calculating loss functions
- ☒ Text-to-speech conversion

 **Correct**
Correct! GANs can be used for tasks like text-to-speech conversion.

- ☒ Data augmentation

 **Correct**
Correct! GANs can augment datasets by generating additional data samples.

- ☒ Image generation

 **Correct**
Correct! GANs are widely used for generating realistic images.

2. How do conditional GANs differ from traditional GANs?

1 / 1 point

- ☐ Conditional GANs do not have a discriminator network
- ☐ Conditional GANs only work with image data
- ☒ Conditional GANs use additional information to generate data
- ☐ Conditional GANs are used solely for text generation

 **Correct**
Correct! Conditional GANs use extra information such as labels to condition the generation process.

3. Which of the following best defines the role of hyperparameters in training a GAN?

1 / 1 point

- ☐ Hyperparameters are the outputs generated by the model.
- ☒ Hyperparameters control the learning process and model architecture.
- ☐ Hyperparameters are the weights updated during training.
- ☐ Hyperparameters are the input data to the model.

 **Correct**
Correct! Hyperparameters indeed control various aspects of the learning process and model architecture.

4. What is a common method to plot the progress of a GAN during training?

1 / 1 point

- ☒ Plotting the discriminator and generator loss values over epochs.
- ☐ Evaluating the runtime of each training epoch.
- ☐ Counting the number of generated images.
- ☐ Using a confusion matrix to compare real and fake images.

 **Correct**
Correct! Plotting the loss values over epochs helps in visualizing the training progress and identifying any issues.

5. Which of the following steps are involved in creating ordered sample labels for displaying images in a GAN?

1 / 1 point

- ☒ Assigning sequential labels to generated images

 **Correct**
Correct! Assigning sequential labels helps in organizing and displaying the images in order.

- ☒ Sorting the generated images based on their features

 **Correct**
Correct! Sorting images based on features can help in creating a meaningful display order.

- ☐ Updating the discriminator with the ordered labels
- ☐ Generating random noise vectors
