1. What are some challenges associated with training conditional GANs?

1 / 1 point

☒ Limited availability of labeled data.

 **Correct**

Right. Labeled data is essential and often limited, posing a challenge.

☐ Ensuring the model generates only realistic images.

☒ Mode collapse.

 **Correct**

Correct. Mode collapse is a common challenge where the generator produces limited varieties of output.

☒ Difficulty in balancing the generator and discriminator training.

 **Correct**

Correct. Balancing the training between the generator and the discriminator is crucial and challenging.

☐ Reduced computational resources compared to regular GANs.

2. What is the primary advantage of using a conditional GAN over a regular GAN in image generation?

1 / 1 point

☒ It allows for control over the generated image labels.

☐ It reduces the computational cost of training the model.

☐ It guarantees higher resolution images.

☐ It simplifies the architecture of the neural network.

 **Correct**

Correct! Conditional GANs enable control over the labels of generated images, making the generation process more targeted.

3. When generating images with specific labels using a trained conditional GAN, what is a common technique for feeding the label information into the network?

1 / 1 point

☒ Concatenating the label with the noise vector before feeding it to the generator.

☐ Using the label to initialize the weights of the generator network.

☐ Feeding the label as a separate input to the generator after the noise vector.

☐ Embedding the label into the discriminator network only.

 **Correct**

Correct! Concatenating the label with the noise vector helps the generator produce images corresponding to the given label.

4. Which step is essential when adapting a GAN model to a new dataset?

1 / 1 point

☐ Implementing a different activation function in the discriminator.

☐ Using a larger batch size during training.

☐ Increasing the number of layers in the generator network.

☒ Preprocessing the new dataset to match the input format expected by the GAN.

 **Correct**

Correct! Preprocessing the dataset ensures that the input is in the correct format, which is crucial for successful training.

5. What is the primary purpose of using a conditional GAN in generating fashion images?

1 / 1 point

☐ To reduce the computational cost of training the GAN.

☒ To generate images based on specific categories or conditions.

☐ To increase the resolution of the generated images.

☐ To improve the discriminator's ability to classify real and fake images.

 **Correct**

Correct! Conditional GANs are used to generate images based on given conditions or categories, allowing for more controlled and targeted image generation.
