

Advanced Generative Adversarial Networks (GANs)	×
Module 1 ResNet50 Transfer Learning Using Google Colab GPU - Training and Prediction	▼
Module 2 Popular Neural Network Types	▼
Module 3 Generative Adversarial Networks GAN Introduction	▼
Module 4 Simple Transpose Convolution Using a Grayscale Image	▼
Module 5 Generator and Discriminator Mechanism Explained	▼
Module 6 A fully Connected Simple GAN Using MNIST Dataset - Introduction	▼
Module 7 Fully Connected GAN - Loading the Dataset	▼
Module 8 Fully Connected GAN - Defining the Generator Function	▼
Module 9 Fully Connected GAN - Defining the Discriminator Function	▼
Module 10 Fully Connected GAN - Combining Generator and Discriminator Models	▼
Module 11 Fully Connected GAN - Compiling Discriminator and Combined GAN Models	▼
Module 12 Fully Connected GAN - Discriminator Training	▼
Module 13 Fully Connected GAN - Generator Training	▼
Module 14 Fully Connected GAN - Saving Log at Each Interval	▼
Module 15 Fully Connected GAN - Plot the Log at Intervals	▼
Module 16 Fully Connected GAN - Display Generated Images	▼
Module 17 Saving the Trained Generator for Later Use	▼
Module 18 Generating Fake Images Using the Saved GAN Model	▼
Module 19 Fully Connected GAN Versus Deep Convoluted GAN	▼
Module 20 Deep Convolutional GAN - Loading the MNIST Handwritten Digits Dataset	▼
Module 21 Deep Convolutional GAN - Defining the Generator Function	▼
Module 22 Deep Convolutional GAN - Defining the Discriminator Function	▼
Module 23 Deep Convolutional GAN - Combining and Compiling the Model	▼
Module 24 Deep Convolutional GAN - Training the Model	▼
Module 25 Deep Convolutional GAN - Training the Model Using Google Colab GPU	▼
Module 26 Deep Convolutional GAN - Loading the Fashion MNIST Dataset	▼
Module 27 Deep Convolutional GAN - Training the MNIST Fashion Model Using Google Colab GPU	▼
Module 28 Deep Convolutional GAN - Loading the CIFAR-10 Dataset and Defining the Generator	▼
Module 29 Deep Convolutional GAN - Defining the Discriminator	▼
Module 30 Deep Convolutional GAN CIFAR-10 - Training the Model	▼
Module 31 Deep Convolutional GAN - Training the CIFAR-10 Model Using Google Colab GPU	▼

Conclusion to the Course 'Advanced Generative Adversarial Networks (GANs)'

Congratulations on completing the **Advanced Generative Adversarial Networks (GANs)** course! Let's take a moment to recap the significant milestones you've achieved:

In this comprehensive course on Generative Adversarial Networks (GANs), you mastered AI-driven image synthesis, starting with the fundamentals of GANs, including the Generator and Discriminator components. You explored the architectures and implementations of fully connected and deep convolutional GANs. The course included hands-on tutorials using MNIST and CIFAR-10 datasets for loading, preprocessing, and training GAN models, leveraging Google Colab for GPU acceleration. Advanced topics such as Conditional GANs, label embedding, and model optimization techniques were covered. Practical projects enabled you to apply your knowledge to generate and analyze realistic images, bridging theory and real-world application.

As you continue to build on these skills, we recommend enrolling in the following courses that are part of our specialization title, [Keras Deep Learning & Generative Adversarial Networks \(GAN\)](#) [🔗](#) to further enhance your capabilities:

Fundamentals of AI, Machine Learning, and Python Programming: Unlock the potential of AI and machine learning with our in-depth course. Explore fundamental concepts, delve into deep learning and neural networks, and master Python programming essentials. Equip yourself with the skills needed to excel in the rapidly evolving tech landscape.

Deep Learning with Keras and Practical Applications: This course offers a deep dive into Keras for practical applications. From predicting red wine quality to mastering image augmentation, you'll gain hands-on experience building and optimizing deep learning models. Perfect for tech professionals aiming to enhance their machine learning expertise.

Thank you for being a part of this course. Keep up the great work, and happy learning!

Mark as completed
