Your grade: 85.50%

Your latest: **85.50%** • Your highest: **85.50%** • To pass you need at least 80%. We keep your highest score.

coach

Almost there! Let's review your answers and then try again.

Your work showed skill in understanding the setup and management of open-source models and APIs, but there is room for growth in understanding local server interactions, endpoint configurations, and streaming responses. Before retrying this assignment, we recommend focusing on these key areas:

- **Exploring the local Server API endpoint of our open-source model**: In Question 3, your understanding of the main purpose of setting up a local server to interact with a Python model was incorrect. Try reviewing this item.
- **A different way to use local server API endpoint for open source LLMs with Python**: In Question 7, the essential step for setting up OMA to call an endpoint was misunderstood. Try reviewing this item.
- **No code chat with open-source models locally for free**: In Question 10, the steps required to interact with downloaded models for chat interactions using Python or Postman were not correctly identified. Try reviewing this item.
- **Open source llama3 model with web interface in Python**: In Question 14, the benefits of using Lamma and Streamlit to implement a web frontend were not fully understood. Try reviewing this item.
- **Streaming openai chatgpt responses with Python low code**: In Question 16, the steps involved in obtaining a streaming response using Open API were not correctly identified. Try reviewing this item.

Good job on the rest of the assignment!

Retry assignment

1. Which of the following steps are involved in setting up O Lama in Python? 1 / 1 point

- [x] Checking the installation
 - Correct: Correct! Checking the installation is an important step to ensure O Lama is properly set up in Python.
- [x] Listing installed models
 - Correct: Correct! Listing installed models is a step involved in setting up O Lama to ensure the models are correctly installed and available for use.
- [] Downloading Visual Studio Code
- [x] Installing necessary packages
 - Correct: Correct! Installing necessary packages is a crucial step in setting up O Lama in Python to make sure all dependencies are met.
- [] Creating a .env file

2. Which steps are involved in searching for and managing open source models in LM Studio? 1 / 1 point

- [x] Download selected models
 - Correct: Correct! Downloading selected models is a key step in managing open source models.
- [x] Search for models using the search bar
 - Correct: Correct! Using the search bar to search for models is one of the steps.
- [] Set up a code editor
- [] Obtain an API key from OpenAI
- [x] Manage models through the interface
 - Correct: Correct! Managing models through LM Studio's interface is one of the steps involved.

3. What is the main purpose of setting up a local server to interact with a Python model? 0 / 1 point

- () To check the version of Python installed
- (•) To configure API endpoints for external calls
- () To retrieve the model's response after running a Python script
- () To install necessary software packages
 - Incorrect: Incorrect. Configuring API endpoints is related but not the main purpose of setting up a local server to interact with a Python model.

4. What is the first step to take when installing Python using python.org? 1 / 1 point

- (•) Download the latest version of Python.
- () Configure environment variables.
- () Set up a local server.
- () Install a code editor like Visual Studio Code.
 - Correct: Correct! The first step is to visit python.org and download the latest version of Python.

5. What is a crucial step in searching for and managing open source models in LM Studio? 1 / 1 point

- () Installing additional plugins
- () Editing the source code of LM Studio
- (•) Using the built-in search functionality
- () Creating a custom search algorithm
 - Correct: Correct! The built-in search functionality in LM Studio allows you to efficiently search for and manage open source models.

6. What steps are involved in setting up a local server to interact with a Python model? 1 / 1 point

- [x] Starting the server
 - Correct: Correct! Starting the server is an essential step.
- [] Creating a virtual machine
- [x] Installing necessary packages
 - Correct: Correct! You need to install all necessary packages to run the server.
- [x] Running a Python script to prompt the model
 - Correct: Correct! You need to run a Python script to prompt and interact with the model.
- [] Configuring a network firewall

7. Which step is essential for setting up OMA to call an endpoint? 0 / 1 point

- () Installing Python using Anaconda
- () Creating a .env file
- () Configuring the OMA configuration file
- (•) Downloading Visual Studio Code
 - Incorrect: Incorrect. While Visual Studio Code is useful for coding, it is not essential specifically for setting up OMA to call an endpoint.

8. What is the purpose of creating a .env file when setting up a local server to interact with a Python model? 1 / 1 point

- (•) To store environment variables
- () To configure logging settings
- () To list all installed Python packages
- () To document API endpoints
 - Correct: Correct! The .env file is used to store environment variables.

9. Which of the following is a required step for downloading and running specific models in O Lama? 1 / 1 point

- (•) Accessing the O Lama model repository
- () Configuring environment variables in a .env file
- () Creating a virtual environment in Python
- () Installing packages from a requirements.txt file
 - Correct: Correct! Accessing the O Lama model repository is essential for downloading specific models.

10. What steps are required to interact with downloaded models for chat interactions using Python or Postman? 0.5 / 1 point

- [] Signing up for OpenAI and creating an API key
- [x] Running the downloaded models through a code editor
 - This should not be selected: Incorrect. Running the models through a code editor is not a direct step required for using Python or Postman for chat interactions.
- [x] Writing or configuring the code or endpoints for interaction
 - Correct: Correct! Writing or configuring the code or endpoints is essential for making API calls to interact with the models.
- [] Setting up environment variables for API keys
- [] Downloading the model using LM Studio
- [x] Installing Python or Postman
 - Correct: Correct! Installing Python or Postman is necessary to set up the environment for interacting with the models.

11. Which of the following libraries can be used to retrieve stock prices in Python while enhancing large language models like GPT-3? 1 / 1 point

- () requests
- (•) yfinance
- () matplotlib
- () pandas
 - Correct: Correct! The yfinance library is specifically designed for retrieving stock prices and other financial data.

12. Select the correct steps involved in incorporating functions into large language models. 1 / 1 point

- [x] Defining their structure
 - Correct: Correct! Defining the structure of the functions is essential for proper integration.
- [x] Adding them as options to the model
 - Correct: Correct! Adding the functions as options is a key part of the process.
- [x] Specifying functions
 - Correct: Correct! Specifying functions is a vital step in incorporating them into large language models.
- [] Writing unit tests

13. What Python code would you use to send a query using the OpenAI API and print the response? 1 / 1 point

- () python\nimport openai\nopenai.api_key = 'your-api-key'\nresponse = openai.Engine.create(prompt='Hello, world!')\nprint(response)
- () python\nimport openai\nopenai.api_key = 'your-api-key'\nresponse = openai.Image.create(prompt='Hello, world!')\nprint(response)
- () python\nimport openai\nopenai.api_key = 'your-api-key'\nresponse = openai.Completion.get(prompt='Hello, world!')\nprint(response)
- (•) python\nimport openai\nopenai.api_key = 'your-api-key'\nresponse = openai.Completion.create(engine='davinci', prompt='Hello, world!')\nprint(response)
 - Correct: Correct! This code sends a query to the OpenAI API and prints the response.

14. What are some benefits of using Lamma and Streamlit to implement a web frontend? 0.8 / 1 point

- [] Seamless integration with machine learning models
- [] Advanced security features
- [] High performance in handling large datasets
- [x] Built-in support for interactive visualizations
 - Correct: Correct! Both frameworks have built-in support for interactive visualizations.
- [x] Ease of use and quick setup
 - Correct: Correct! Both Lamma and Streamlit are known for their ease of use and quick setup.

You didn't select all the correct answers

15. What is a necessary step for setting up the OpenAI API key to access GPT-3 and GPT-4 models? 1 / 1 point

- () Increasing the payload size sent by the server
- () Generating real-time analytics on server performance
- (•) Creating a client to make requests
- () Implementing the yfinance package
 - Correct: Correct! Creating a client is essential for making requests to the API.

16. Select the steps involved in obtaining a streaming response using Open API. 0.8 / 1 point

- [] Use the yfinance package to get stock prices
- [x] Send a query to the OpenAI API
 - Correct: Correct! Sending a query is a crucial step.
- [x] Set up the API key
 - Correct: Correct! Setting up the API key is necessary.
- [] Generate real-time analytics on server performance
- [] Enable streaming responses in Ola

You didn't select all the correct answers

17. What is the purpose of defining the structure of functions when incorporating them into large language models? 1 / 1 point

- (•) To ensure the model can interpret and use the functions correctly
- () To enable automated updating of the model
- () To improve the model's image recognition capabilities
- () To enhance the model's voice synthesis
 - Correct: Correct! Defining the structure is essential for the model to interpret and utilize the functions correctly.

18. Which library is commonly used to build a web frontend in Python for integrating with open source models? 1 / 1 point

- (•) Streamlit
- () Django
- () Flask
- () Tkinter
 - Correct: Correct! Streamlit is indeed commonly used for building web frontends in Python.

19. What is the first step in setting up the OpenAI API key to access GPT-3 and GPT-4 models? 1 / 1 point

- (•) Obtain the API key from OpenAI
- () Apply for API access
- () Import the OpenAI library
- () Set the API key as an environment variable
 - Correct: Correct! The first step is to obtain the API key from OpenAI..

20. Which of the following are essential steps to integrate open source models with a web frontend? 1 / 1 point

- [x] Configure the server for model hosting
 - Correct: Correct! The server must be configured to host the model and handle requests.
- [x] Set up the frontend framework
 - Correct: Correct! Setting up the frontend framework is crucial for integration.
- [] Optimize the model for mobile devices
- [x] Define API endpoints
 - Correct: Correct! API endpoints need to be defined for the frontend to communicate with the model.
- [] Implement real-time data analytics
