Course Description

Welcome to the course on **Programming with Generative AI**! This course is designed to equip you with the essential skills and knowledge to effectively utilise *GitHub Copilot* for project implementation.

This course is designed for individuals who have a basic understanding of programming concepts and are eager to explore the capabilities of GitHub Copilot. Whether you're a software developer, computer science student, or coding enthusiast, this course will empower you to harness the power of GitHub Copilot to enhance your coding experience.

To make the most of this course, you should have basic proficiency in at least one programming language (e.g., Python, JavaScript, Java).

By the end of this course, you will be able to:

1. Understand the fundamentals of GitHub Copilot and its features.
2. Integrate GitHub Copilot into their development workflow effectively.
3. Utilise GitHub Copilot to generate code snippets, functions, and more.
4. Troubleshoot common issues and optimise the use of GitHub Copilot for project implementation.

Here's what you need to get started:

- Visual Studio Code: You'll need to install this free code editor. We provide instructions!
- Python: You'll need Python installed on your computer. Don't worry, we have instructions for that too!
- [GitHub Copilot](#)  subscription: This is a paid service, but it's key for using Copilot in this course.
