2. Which of the following is a feature of GitHub Copilot?5 / 5 points

It can only generate Python code

It can predict the next series of code lines

It directly edits and optimizes the code

It can only operate offline

Like

Dislike

Report an issue

Correct

Correct! GitHub Copilot predicts the next series of code lines based on the context.

3. What is the primary benefit of having a GitHub Copilot account?5 / 5 points

To get discounts on software purchases

To contribute to open-source projects

To access free cloud storage

To enhance coding productivity with AI-powered suggestions

Correct

Correct! GitHub Copilot enhances coding productivity by providing AI-powered code suggestions.

4. If you want to use GitHub Copilot's chat feature in a machine learning project, which environment would you most likely be working in?5 / 5 points

Microsoft Excel

AutoCAD

Adobe Photoshop

Visual Studio Code

Correct

Correct! You'd likely be working in Visual Studio Code, a popular environment for coding and machine learning projects.

5. What are the unique features of GitHub Copilot when compared with other generative AI tools?1 / 1 point

It can only be used with Python

It can create 3D models

It requires a physical server setup

It supports dynamic code generation, multiple languages, and interactivity

Correct

Correct! GitHub Copilot supports dynamic code generation, multiple languages, and interactive features.

6. What does GitHub Copilot offer primarily?1 / 1 point

Intelligent code suggestions

Code completion only

Debugging tools only

Code formatting options only

Correct

It suggests code snippets in real-time, providing context-aware and dynamic completions to assist developers during coding tasks.
