estimate.py estimate_one_file

```
1 import pandas as pd
2
3
4 def find_matches(df, card_list):
5     # cards_col = df["Cards"].fillna("").astype(str)
6     matches = pd.Series(True, index=df.index)
7     for card in card_list:
8         matches = matches & df["Cards"].str.contains(card)
9         # Ensure card is exactly one of the top cards
10        # matches &= cards_col.str.split().apply(lambda x: card in x)
11    return matches
12
13
14 def estimate_one_file(fname, card_list):
15     # use pandas to read the file called fname
16     # use find_matches to get a Series of booleans
17     # use that Series of booleans to filter the data
18     # sum the filtered data with axis = 0 and
19     # compute the percentages (totals / total)
20     # return the percentages
21     df = pd.read_csv(fname)
```
