As we wrap up this course, we just wanted to take a moment to congratulate you on completing the Poker Project! We know that was a TON of work, and it wasn't always easy—but we also know you learned so much from doing it!

Your Python programming skills are really improving, and you put them all to use to do that project: from loops and if statements, to classes, reading files, manipulating lists, writing test cases and a variety of other things—you put it all together to build a pretty good sized program.

Before you finish this course, your last assignment (next item on Coursera) will be to reflect briefly on not only the Python skills you learned earlier and how you put them to use in the Poker project, but also to reflect on what you learned about breaking down large problems into manageable sized pieces.

Once again—great job on the Poker project, and we hope you are proud of yourself for all you have learned and the hard work you did on it.
