☰ Instructions

1.

In a PyTorch neural network, by setting the layer field requires_grad to False, one can turn off the weight optimization, thus stopping training of that layer.

1 / 1 point
- ☒

True

☐

False

✔ Correct

Setting requires_grad to False in a PyTorch neural network layer prevents weight updates, effectively stopping the training of that layer.

2.

PyTorch was one of the first frameworks that use computational graphs for deep NN.

1 / 1 point

☐

False

☒

True

✔ Correct

PyTorch was a pioneer in using dynamic computational graphs, offering more flexibility than static graph frameworks.

3.

PyTorch requires class labels (integers) being "int32".

1 / 1 point

☐

True

☒

False

✔ Correct

It requires int64.

4.

Zeroing the gradient at every batch is crucial.

1 / 1 point

☒

True

☐

False

✔ Correct

Zeroing gradients at every batch prevents incorrect updates due to accumulation.

5.

In the module, _reset() resets weights of the NN.

1 / 1 point

☒

True

☐

False

✔ Correct

In many implementations, _reset() is used to reset the weights of a neural network.

6.

An RNN requires a feedback connection.

1 / 1 point

☐

False

☒

True

✔ Correct

An RNN needs feedback connections to handle sequential data.

7.

The ReLU activation function helps avoiding vanishing gradients.

1 / 1 point

☐

False

☒

True

✔ Correct

It helps avoid vanishing gradients by providing a non-zero gradient for positive inputs.

8.

PyTorch does not need a conversion of the model pipeline script for GPU support.

1 point

☒

True

☐

False

✘ Incorrect

TensorFlow 2.0 does not need a conversion of the model pipeline script for GPU support.

9.

__init__ is the constructor in a class.

1 / 1 point

☒

True

☐

False

✔ Correct

__init__ is the constructor method in a Python class, used to initialize an object's attributes.

10.

minibatch_size is determined by hyperparameter tuning.

1 / 1 point

☐

False

☒

True

✔ Correct

The minibatch_size is a hyperparameter that is typically determined through tuning to optimize model performance.
