Assessment 3

Review Learning Objectives

1. Which quantum computing frameworks support for quantum machine learning? (Select all that apply) **1 / 1 point**

- [x] Qiskit

  Correct
  Correct! Qiskit also provides libraries and tools for quantum machine learning.

- [ ] MATLAB
- [x] Microsoft Quantum Development Kit

  Correct
  Correct! The Microsoft Quantum Development Kit supports quantum machine learning as well.

- [x] TensorFlow Quantum

  Correct
  Correct! TensorFlow Quantum is specifically designed for quantum machine learning.

- [x] CIRQ

  Correct
  Correct! CIRQ can be used for quantum machine learning applications.

2. Which component of Anaconda is specifically designed for managing Python packages? **1 / 1 point**

- ( ) Anaconda Navigator
- ( ) Jupyter Notebook
- ( ) Spyder
- (•) Conda

  Correct
  Correct! Conda is the package management system within Anaconda.

3. What is the primary purpose of installing Anaconda for this course? **1 / 1 point**

- (•) To manage different versions of Python packages easily.
- ( ) To serve as an operating system for quantum computers.
- ( ) To enhance the graphical processing capabilities of your computer.
- ( ) To provide a text editor for writing Python code.

  Correct
  Correct! Anaconda helps in managing different versions of Python packages, which is essential for a smooth workflow in quantum computing.

4. What are the prerequisites for installing Qiskit via the Anaconda prompt? **0.8 / 1 point**

- [x] Anaconda or Miniconda installed

  Correct
  Correct. You need Anaconda or Miniconda installed to use the Anaconda prompt.

- [ ] Installing Docker
- [x] Creating a virtual environment

  This should not be selected
  While creating a virtual environment is recommended, it is not a prerequisite for installing Qiskit.

- [x] Python 3.6 or later

  Correct
  Correct. Qiskit requires Python 3.6 or later.

- [x] Internet connection

  Correct
  Correct. An internet connection is required to download Qiskit packages.

5. Which of the following steps are necessary to test Qiskit installation in a Jupyter notebook? **0.8 / 1 point**

- [x] Restart the Jupyter kernel

  This should not be selected
  Restarting the kernel is not necessary for testing the Qiskit installation. Review the steps involved.

- [ ] Install Python on your system
- [ ] Install JupyterLab
- [x] Run 'import qiskit' in a code cell

  Correct
  Correct. Running this command is essential to verify the installation.

- [x] Open a Jupyter notebook

  Correct
  Correct. Opening a Jupyter notebook is a required step.
