

Unable to use qiskit_textbook module

Asked 4 years, 6 months ago Modified 4 years ago Viewed 5k times

When I tried to use the Qiskit textbook module, it threw the following error:

6 Command was:

```
from qiskit_textbook.tools import array_to_latex
array_to_latex(final_state, pretext=\\text{\\text{Statevector}} = \\)
```

Error was:

```
ModuleNotFoundError: Traceback (most recent call last)
<ipython-input-10-fd66c6f7a6d> in <module>
----> 1 from qiskit_textbook.tools import array_to_latex
      2 array_to_latex(final_state, pretext=\\text{\\text{Statevector}} = \\)

ModuleNotFoundError: **No module named 'qiskit_textbook'**
```

When I looked up the version I had, it showed the following:

```
{'qiskit-terra': '0.12.0',
 'qiskit-aer': '0.4.1',
 'qiskit-ignis': '0.2.0',
 'qiskit-jobs-provider': '0.5.0',
 'qiskit-aqua': '0.6.4',
 'qiskit': '0.16.1'}
```

Can someone help me in resolving the issue?

The qiskit textbook is not a standard module included with qiskit, it has to be installed separately. The repo where it is kept is [here](#). [This link](#) explains how to pip install from a git repo, you need to use a slightly different command to normal pip installs.
