What you'll learn

- ✓ Understand the philosophical, scientific, and historical foundations of artificial intelligence and machine learning.
- ✓ Apply Python programming concepts to implement AI algorithms, machine learning models, and deep learning architectures.
- ✓ Use essential statistics concepts, like probability, linear algebra and statistical learning theory, to develop and analyze machine learning models.
- ✓ Implement and compare machine learning algorithms, such as linear regression and logistic regression, for both regression and classification tasks.

Skills you'll gain

Specialization - 4 course series

This specialization will prepare learners to enter the exciting fields of artificial intelligence (AI) and machine learning. Across four courses, learners will familiarize themselves with AI, machine learning and deep learning essentials, while also gaining experience with statistics—the backbone of any machine learning problem. Learners will use Python to write programs that accomplish basic AI and machine learning tasks. By the end of this specialization, learners will be able to confidently use and discuss AI and machine learning tools and concepts, improve their Python skills, and be primed for more advanced study in these fields.

Applied Learning Project

Learners will complete Python coding assignments to solve common AI and Machine Learning tasks, such as uninformed/informed search and linear regression problems. In addition, learners will solve statistics assignments, building skills needed to address nearly every data science problem.

Why people choose Coursera for their career

Felipe M.
Learner since 2018

"To be able to take courses at my own pace and rhythm has been an amazing experience. I can learn whenever it fits my schedule and mood."

Jennifer J.
Learner since 2020

"I directly applied the concepts and skills I learned from my courses to an exciting new project at work."
