1. When building a content-based recommender system, it's important to express both your items and users using the same embedding space (that is, the same dimensions and features).1 / 1 point

- ☒ True.
- ☐ False

✔ Correct
We calculate our recommendation using the product of the user embedding and the item embedding, so it's critical that the dimensions of these two embeddings are the same.

2. Choose the correct three answers. What are some potential techniques to determine how similar two items are? There could be more than one answer.1 / 1 point

- ☒ Count how many features the two items have in common.
- ✔ Correct
Correct
- ☒ Measure the cosine similarity between the two items in an embedding space.
- ✔ Correct
Correct
- ☐ Compare the norms (which are directionless) of the two items in an embedding space to see if they are similar.
- ☒ Compute the inner product between the two items in an embedding space.
- ✔ Correct
Correct
- ☐ Plot the two items in the embedding space and simply visually inspect to see how close they are on a graph by looking briefly.
