5.6 Template Matching by Correlation

Self-check Quiz

1. How do we perform template matching? (Select all that apply)

1 / 1 point

☒ By minimizing Squared error between image and template
☒ Correct
 Ready to review what you've learned before taking the quiz? I'm here to help.
 Please refer to the lecture video [or](#) [help me practice](#) [or](#) [Let's chat](#)

☐ By minimizing Squared error between image and template
☐ By minimizing correlation **Submit your assignment**
☒ By maximizing correlation
 Try again

Correct

To Pass 50% or higher

Your grade 100%

2. What is the main purpose of normalizing cross-correlation?

1 / 1 point

☒ Making template matching more robust to different scales **Report an issue**

☐ To make it behave like a convolution

☐ To minimize energy differences between template and image

☒ Correct
 Please refer to the lecture video

3. We have learned about convolution and correlation. Which of the following statements are true? (Select all that apply)

1 / 1 point

☒ Convolution is used for a linear, time-invariant filtering
☒ Correct
 Please refer to the lecture video

☐ Correlation is used for a linear, time-invariant filtering
☐ Convolution is used to find the similarity between images
☒ Correlation is used to find the similarity between images
