

Improving your statistical inferences

by Eindhoven University of Technology

Daniel Lakens

Welcome to the course 'Improving Your Statistical Inferences'! I hope this course will provide you with an easy and enjoyable way to learn how to improve the way you interpret the scientific literature, design experiments, and share empirical results. In 22 videos and 10 assignments you will learn how to implement better research practices in your own research.

To begin, I recommend taking a few minutes to explore the course overview in Week 1. Look ahead to see which topics are addressed in each week, and the time you will need for the lectures, assignments, and exams.

If you have questions about course content, please post them in the forums to get help from others in the course community. For technical problems with the Coursera platform, visit the Learner Help Center.

Congratulations!

I will teach you all the things that made me a better researcher when I first learned about these topics, and will especially focus on information you can use in practice, immediately. Enjoy the course!

How likely are you to recommend this course to a friend or colleague?
