You submitted this quiz on **Mon 27 Jul 2015 2:13 AM PDT**. You got a score of **7.00** out of **7.00**.

Question 1

The slow (sometimes called “brute force”) algorithm for finding the shortest common superstring of the strings in set S involves:

Your Answer	Score	Explanation
☐ Concatenating the strings in of S		
☐ Iteratively removing strings from S that don't belong in the superstring		
☒ Trying all orderings of the strings in S	✓ 1.00	
☐ Finding the longest common substring of the strings in S		
Total	1.00 / 1.00	

Question 2

Which of the following is not a true statement about the slow (brute force) shortest common superstring algorithm.

Your Answer	Score	Explanation
☐ It might collapse repetitive portions of the genome		
☐ The amount of time it takes grows exponentially with the number of input strings		
☒ It doesn't always return the shortest common superstring	✓ 1.00	
Total	1.00 / 1.00	

Question 3

Which of the following is not a true statement about the greedy shortest common superstring formulation of the assembly problem?

Your Answer	Score	Explanation
☐ It doesn't always return the shortest common superstring		
☐ It might collapse repetitive portions of the genome		
☒ The amount of time it takes grows exponentially with the number of input strings	✓ 1.00	
Total	1.00 / 1.00	

Question 4

True or false: an Eulerian walk is a way of moving through a graph such that each node is visited exactly once

Your Answer	Score	Explanation
☐ True		
☒ False	✓ 1.00	
Total	1.00 / 1.00	

Question 5

If the genome is repetitive and we try to use the De Bruijn Graph/Eulerian Path method for assembling it, we might find that:

Your Answer	Score	Explanation
☒ There is more than one Eulerian path	✓ 1.00	

☐ The De Bruijn graph breaks into pieces

☐ The genome “spelled out” along the Eulerian path is not a superstring of the reads

Total	1.00 / 1.00
-------	----------------

Question 6

In a De Bruijn assembly graph for given k , there is one edge per

Your Answer	Score	Explanation
-------------	-------	-------------

☐ $k-1$ -mer

☒ k -mer ✓ 1.00

☐ read

☐ genome

Total	1.00 / 1.00
-------	-------------

Question 7

Which of the following does not help with the problem of assembling repetitive genomes:

Your Answer	Score	Explanation
-------------	-------	-------------

☒ Increasing minimum required overlap length for the overlap graph ✓ 1.00

☐ Longer reads

☐ Paired-end reads

Total	1.00 / 1.00
-------	----------------
