2. The "decouple-the-metal-rings" problem is difficult to approach via the same methods as (say) Rubik's Cube. Which of the following reasons is most relevant to this difficulty?

- ☐ There are

3. In fuzzy logic, it is possible to speak of “degrees of truth” using real numbers between 0 and 1. (Here, 0 corresponds to “false” and 1 to “true”.) Thus, we might say that the statement “The 2018 Boston Red Sox are good baseball team” is “0.98 true” (i.e., close to certain) and “The 2018 Baltimore Orioles are a good baseball team” is “0.02 true” (i.e., very close to certainly false). Which of these statements – none of which is entirely true or false – is most true?
