Judgment and Decision Making

1. In the Kahneman and Tversky prospect theory, which of the following human valuation is most relevant to the \$300 bonus scenario?

1 / 1 point

People tend to be over-optimistic in gambling scenarios.

People place a higher weight on losses than gains when making decisions.

People are unpredictable when it comes to judging their risk and reward.

People's valuation function is asymmetric, placing a greater relative weight on loss than on gain.

Correct

2. Which of these sentences, referring to the distinction between judgment and problem solving, is not true?

1 / 1 point

Problem solving is an inherently more recent task than judgment.

Problem-solving tends to involve effortful conscious search, whereas judgment is more reliant on (possibly unconscious) intuition.

People are in general more confident about their problem-solving judgment tasks.

Judgment tasks tend to be more open-ended or common sense scenarios than puzzle-like problem-solving tasks.
