Advanced Topics Exercise 1

Exercise 1

Write a script that imports the `Phone` and `Laptop` classes. These classes are found in the `tech` module. Your script **must** import the classes as follows:

import tech

- Instantiate an instance of the `Phone` class and call it `my_phone`. It should have the name "Pixel 5", the color "sage", and 128 gigabytes of storage. **Important**, all numbers passed to the constructor should be integers.
- Instantiate an instance of the `Laptop` class and call it `my_laptop`. It should have the name "MacBook Pro", a size of 15 inches, and 256 gigabytes of storage. **Important**, all numbers passed to the constructor should be integers.

Expected Output

Print out both `my_phone` and `my_laptop`. You should see the following output.

Print Statement	Output
<code>print(my_phone)</code>	A sage Pixel 5 with 128GB of storage.
<code>print(my_laptop)</code>	15-inch MacBook Pro with 256GB of storage.

TRY IT

A sage Pixel 5 with 128GB of storage.
15-inch MacBook Pro with 256GB of storage.

Submit your code to be evaluated

Here is one potential answer:

```
import tech

my_phone = tech.Phone('Pixel 5', 'sage', 128)
my_laptop = tech.Laptop('MacBook Pro', 15, 256)

print(my_phone)
print(my_laptop)
```

Check It!
