

matplotlib.patches ¶

Classes

<code>Arc(xy, width, height[, angle, theta1, theta2])</code>	An elliptical arc, i.e. a segment of an ellipse.
<code>Arrow(x, y, dx, dy[, width])</code>	An arrow patch.
<code>ArrowStyle(stylename, **kw)</code>	<code>ArrowStyle</code> is a container class which defines several arrowstyle classes, which is used to create an arrow path along a given path.
<code>BoxStyle(stylename, **kw)</code>	<code>BoxStyle</code> is a container class which defines several boxstyle classes, which are used for <code>FancyBboxPatch</code> .
<code>Circle(xy[, radius])</code>	A circle patch.
<code>CirclePolygon(xy[, radius, resolution])</code>	A polygon-approximation of a circle patch.
<code>ConnectionPatch(xyA, xyB, coordsA[, ...])</code>	A patch that connects two points (possibly in different axes).
<code>ConnectionStyle(stylename, **kw)</code>	<code>ConnectionStyle</code> is a container class which defines several connectionstyle classes, which is used to create a path between two points.
<code>Ellipse(xy, width, height[, angle])</code>	A scale-free ellipse.
<code>FancyArrow(x, y, dx, dy[, width, ...])</code>	Like <code>Arrow</code> , but lets you set head width and head height independently.
<code>FancyArrowPatch([posA, posB, path, ...])</code>	A fancy arrow patch.
<code>FancyBboxPatch(xy, width, height[, ...])</code>	A fancy box around a rectangle with lower left at $xy = (x, y)$ with specified width and height.
<code>Patch([edgecolor, facecolor, color, ...])</code>	A patch is a 2D artist with a face color and an edge color.
<code>PathPatch(path, **kwargs)</code>	A general polycurve path patch.
<code>StepPatch(values, edges, *[, orientation, ...])</code>	A path patch describing a stepwise constant function.
<code>Polygon(xy[, closed])</code>	A general polygon patch.
<code>Rectangle(xy, width, height[, angle])</code>	A rectangle defined via an anchor point xy and its <i>width</i> and <i>height</i> .
<code>RegularPolygon(xy, numVertices[, radius, ...])</code>	A regular polygon patch.
<code>Shadow(patch, ox, oy[, props])</code>	Create a shadow of the given <i>patch</i> .

Table of Contents

[matplotlib.patches](#)

`Wedge`(center, r, theta1, theta2[, width])

Wedge shaped patch.

Functions

<code>bbox_artist</code> (artist, renderer[, props, fill])	A debug function to draw a rectangle around the bounding box returned by an artist's <code>Artist.get_window_extent</code> to test whether the artist is returning the correct bbox.
--	--

<code>draw_bbox</code> (bbox, renderer[, color, trans])	A debug function to draw a rectangle around the bounding box returned by an artist's <code>Artist.get_window_extent</code> to test whether the artist is returning the correct bbox.
