All model checkpoint layers were used when initializing TFGPT2LMHeadModel.
All the layers of TFGPT2LMHeadModel were initialized from the model checkpoint.
If your task is similar to the task the model of the checkpoint was trained on, you
can use TFGPT2LMHeadModel for predictions without further training.

Coding Exercise 5

In the top-left pane, write the code that initializes the `"microsoft/DialoGPT-small"` pre-trained model from the transformers package:

Make sure to:

- Use the `transformers` library

Test your code using the terminal in the bottom-left:

TRY IT

Submit your code by clicking the Check it button.

Check It!

LAST RUN on 12/27/2023,
5:56:44 AM

Check 1 passed

Mark as Completed
