

Introduction to the Assessment

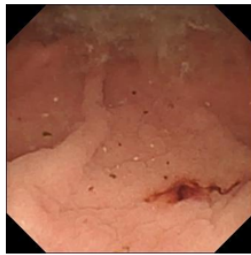

In the next two quizzes, you will be assessed on your understanding of anomaly detection and its workflow. The first one asks conceptual questions about anomaly detection. In the second quiz, you will work with an FCDD detector trained on endoscopy images, such as those shown below:

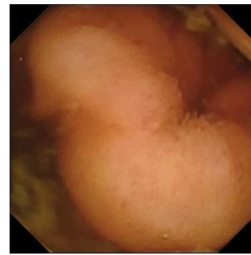

Normal

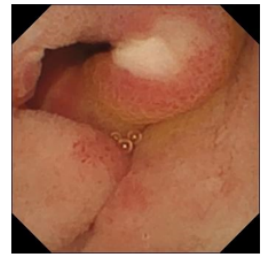

Foreign body

Blood

Polyp

Ulcer

Use the provided trained anomaly detector to answer the questions in the second quiz. Afterward, we encourage to train your own FCDD detector using these images!
