

Fasteners Automation Function

Navigate to Course 3 -> Module 3 and open fastenersImageLabeler.m. You have now seen the improved detector trained using augmentation, so this automation function contains the code shown in the previous video, but with this new detector and more explanatory code comments.

Take some time to review each step of the automation function, and feel free to try out the workflow in the video using the fastener images in Data -> MathWorks Created -> Fasteners -> Model-Assisted Labeling.
