

Assessment Instructions

The quiz for this module has two groups of questions. The first questions will assess your interpretation of evaluating detection models and training options.

To answer the second set of questions, you must evaluate the "fastenerTinyYoloV4Detection" model provided in the course files. This model was trained using the "TransferLearningForFastenerDetection.mlx" code file as shown in Week 2.

Open the "Week3quiz.mlx" file provided in the course files to load the model and ground truth. Then, do an analysis similar to what you saw in the "EvaluatingObjectDetectionModels.mlx" file to answer the quiz questions.
