

Module 2 Summary

After completing all of the materials, please take a moment to reflect on what was covered. The learning objectives below capture the key takeaways from this module:

- Learn the broad components within the AI umbrella domain; understand the elements that comprise an AI system; learn about deployed AI systems in business, with examples.
- Understand how machine learning models differ from statistical models, their focus on prediction; types of learning in AI/ML (supervised, unsupervised, reinforcement, and deep learning with examples); basic elements and types of artificial neural networks; Convolutional Networks with examples.
- Learn key factors in designing AI agents for AI/ML applications; System 1/System 2 thinking; Legal considerations in AI/ML; Aligning machine goals with human goals.
