Questions

1.

What is the primary benefit of integrating Computer Vision with augmented reality (AR) overlays in sports broadcasting in [The Convergence of AI and Computer Vision](#)?

1 / 1 point
- ☐
It allows for real-time weather updates during the game.

☒
It enhances fan engagement by providing immersive experiences and advanced player analysis.

☐
It reduces the cost of broadcasting by replacing physical equipment with virtual ones.

☐
It allows for remote control of the game by viewers.

Correct

The integration of Computer Vision with AR overlays enhances fan engagement by providing immersive experiences and advanced player analysis.

2.

Who was the intended audience for the [Audio Presentation by Soundhound at NRF Tech Conference March 4, 2024](#)?

1 / 1 point

☐
High school students interested in AI.

☒
Investors and stakeholders interested in voice artificial intelligence.

☐
Professional athletes looking to improve their performance.

☐
Musicians looking for new sound technology.

Correct

The audio presentation was primarily aimed at individuals or entities who are current or potential investors in Soundhound AI who attended the NRF conference, as well as those interested in the broader field of voice AI technology. The conference presentation was also relevant to businesses looking for AI solutions to enhance their customer service experiences.

3.

According to the PowerPoint slides for Module 3, which of the following is a key benefit of integrating artificial intelligence (AI) with drone technology?

1 / 1 point

☐
Increased energy consumption for longer flight times.

☒
Enhanced autonomy through reduced need for human intervention.

☐
Decreased operational versatility.

☐
Limited data analysis capabilities.

Correct

AI integration in drones enhances autonomy, reduces human intervention, and improves real-time data processing. This makes drones efficient for surveillance and monitoring. AI also enables adaptive behavior in drones for versatility in various tasks and increases safety by helping drones detect and avoid obstacles.

4.

The concept of "self-evolving machines" in the reading: [Meta's Frank Bilesnet CPU Paves Way For 'Self-Evolving Machines](#) refers to:

1 / 1 point

☒
Machines that can learn and adapt and improve their own designs without human intervention.

☐
Machines built with self-repairing components that can fix minor malfunctions.

☐
Machines designed to operate for extended periods without requiring maintenance.

☐
Machines that mimic human evolution through a process of natural selection.

Correct

The futuristic concept of "self-evolving machines" implies machines that eventually can autonomously learn, adapt, and improve their own designs without human intervention.

5.

According to the PowerPoint slides for Module 3, NVIDIA aims to accomplish which of the following?

1 / 1 point

☐
To simulate environments like forests and oceans for AI-enabled robots to learn from.

☒
To harness expertise in accelerated computing and advanced graphics, thereby empowering robots to sense, think, and act autonomously.

☐
To generate real-world data for AI-enabled robots to learn from.

☐
To generate synthetic data for AI-enabled robots to learn from, but without any specific environment simulations.

Correct

6.

According to the reading article titled [The Convergence of AI and Other Technologies: Driving Innovation in Learning Technologies](#), which is a benefit of the convergence of Machine Learning and NLP?

1 point

☐
Machine Learning algorithms require less data for NLP tasks.

☒
NLP systems can now process human language with perfect accuracy.

☐
The ability of AI systems to continuously adapt and improve is enhanced.

☐
Machine Learning developments are completely independent of NLP advancements.

Incorrect

This is incorrect because while NLP has improved, the article doesn't claim perfect accuracy.

7.

From the reading [Is Powering 5G networks will reshape digital interactions](#), what can you NOT infer about 5G networks?

1 / 1 point

☐
They will be more advanced than 5G networks.

☐
They will rely on artificial intelligence for some functionalities.

☒
They will be slower than previous generations of mobile networks.

☐
They will enable new forms of digital interactions.

Correct

Correct because this CANNOT be inferred about 5G networks from the reading article.

8.

In the context of driving automation, how is the level of automation (as shown in [Self-Driving Cars: A Guide](#)) determined in any given instance of an road operation of an equipped vehicle?

1 point

☒
The level of automation is determined by the most advanced feature that the vehicle's driving automation system is capable of delivering.

☐
The level of automation is determined by the feature(s) that are engaged in any given instance.

☐
The level of automation is determined by the total number of features that the vehicle's driving automation system is capable of delivering.

☐
The level of automation is determined by the specific role played by the human user in the performance of the DDF and/or DDF fallback.

Incorrect

This is incorrect because the level of automation is not determined by the most advanced feature that the vehicle's driving automation system is capable of delivering, but by the feature(s) that are engaged in any given instance.

9.

Which of the following AI-driven products was highlighted during the [Audio Presentation by Soundhound at NRF Tech Conference March 4, 2024](#)?

1 / 1 point

☐
Soundhound Music Streaming

☒
Soundhound Smart Answering

☐
Soundhound Fitness Tracker

☐
Soundhound Social Media Analysis

Correct

During the presentation, Soundhound highlighted its AI-driven products like Smart Answering, Smart Dialing, and Dynamic Interaction™, a real-time, multimedial customer service interface. These products demonstrate how Soundhound's voice AI solutions offer businesses incredible conversational experiences.

10.

According to [Evan Dukes Explains The Transformative Power of Machine Learning](#), what is the primary advantage of machine learning over traditional analytics in dealing with modern datasets?

1 / 1 point

☐
Machine learning algorithms can handle larger datasets than traditional analytics.

☒
Machine learning algorithms can uncover hidden patterns and provide a deeper understanding of the data.

☐
Machine learning algorithms can generate raw data for further analysis.

☐
Machine learning algorithms can reduce the size of the datasets for easier handling.

Correct

Machine learning algorithms thrive in the environment of modern datasets, uncovering hidden patterns and providing a deeper understanding of the data.

11.

According to the article [The Convergence of AI and Other Technologies](#), what is a potential benefit of the convergence of AI and other technologies?

1 / 1 point

☐
AI systems will require less data for training and operation.

☐
The need for human expertise in various fields will be significantly reduced.

☒
New solutions can be developed to address complex challenges that individual technologies couldn't solve alone.

☐
The convergence will lead to a decrease in the variety of technological tools available.

Correct

The convergence of AI and other technologies allows for the development of innovative solutions that can tackle complex challenges which individual technologies couldn't address on their own.

12.

According to the reading [Asimov's Three Laws of Robotics: Applied to AI](#), what are Asimov's Three Laws of Robotics?

1 / 1 point

☐
A classification system for different types of robots based on their capabilities.

☒
A set of ethical principles designed to guide the development and use of robots.

☐
Instructions for programming specific behaviors into robots.

☐
Safety standards for manufacturing and operating robots in industrial settings.

Correct

Asimov's Three Laws are intended to guide ethical behavior in the development and use of robots.

13.

According to the reading article titled [Meta's Frank Bilesnet CPU Paves Way For 'Self-Evolving Machines](#), what was the significant achievement of the AI in the development of a RISC-V CPU?

1 / 1 point

☐
The AI was able to develop a CPU with more sophisticated parts than a human team could.

☒
The AI was able to develop a CPU in approximately five hours, a task that could have taken a dedicated human team an estimated 5,000 hours.

☐
The AI was able to develop a CPU without any human intervention.

☐
The AI was able to develop a CPU that outperformed all existing CPUs.

Correct

The significant achievement was that the AI could design a functional RISC-V CPU within five hours, compared to the estimated 5,000 hours a human team would require.

14.

According to the reading article titled [Asimov's Three Laws of Robotics: Applied to AI](#), in the context of the modern interpretations, how have the concepts such as "robot" and "injury" evolved?

1 / 1 point

☐
The term "robot" is now only used to refer to physical machines, and "injury" refers solely to physical harm.

☒
The term "robot" has expanded to include complex, omnipresent computational algorithms, and "injury" can now include non-physical harm such as misleading information that can sow discord or mislead a populace.

☐
The term "robot" is now considered obsolete and is no longer used in the context of AI, and "injury" has no relevance in this context.

☐
The term "robot" is now used to refer to any AI system, and "injury" refers to any technical malfunction in these systems.

Correct

In the modern AI ecosystem, "robot" now encompasses advanced computational algorithms, and "injury" includes non-physical harms like misinformation.

15.

Which of the following best describes the impact of Computer Vision technology in sports broadcasting, as outlined in the reading [The Convergence of AI and Computer Vision](#)?

1 / 1 point

☒
It allows for the real-time analysis of player movements, enhancing coaching and viewing experiences.

☐
It replaces human referees entirely with AI-driven systems.

☐
It focuses solely on improving the accuracy of scorekeeping.

☐
It reduces the need for live broadcasting of sports events.

Correct

The reading [The Convergence of AI and Computer Vision](#) discusses how Computer Vision is used to track and analyze the movements of objects like players and equipment, providing valuable data for real-time insights and enhancing both coaching and fan engagement through data-driven decisions and interactive graphics.
