Kidney renal clear cell carcinoma is predicted to be high risk (left), with the AI-predicted “risk heatmap” on the right; red patches correspond to “high-risk” and blue patches to “low-risk”.

As you can see on the image on the right, the AI support system highlights the regions of high risk where cancer cells are more likely to be. This eliminates the need to physically analyze the whole image of a kidney, providing hints for medical expertise and attention. Similar heatmaps are used

FINANCIAL NEWS MINING

Another interesting case is, for example, the use of financial news texts in conjunction with fundamental analysis to forecast stock values. A prime example of this would be “trading on Elon Musk’s tweets,” whose tweets had a dramatic effect on the value of several cryptocurrencies (Dogecoin and Bitcoin), as well as the value of his own company. The point is that if someone can impact stock prices so much through social media, it is worth knowing about these posts in
