

Your grade: 93.33%

Almost there! Let's review your answers and then try again.

Our work demonstrated a strong understanding of AI regulations, ethics, and strategies. However, there is room for improvement in understanding the historical context of AI. Before retrying this assignment, we recommend focusing on these key areas:

- **AI Ethics - Part 1:** In Question 4, your answer regarding Alan Turing's central question of artificial intelligence was incorrect. Try reviewing [this item](#) to better understand the definition and multidisciplinary nature of AI ethics and the importance of educating the public about AI tracking and anthropomorphism.

Good job on the rest of the assignment.

Instructions

According to the reading article [AI Regulation in the U.S.: What's Coming and What Companies Need to Do in 2023 | News & Insights | PwC & Co.](#)

what is the main focus of AI regulations discussed for the year 2023 in the United States?

- ☐ Reducing AI development to limit technological risks.
- ☒ Implementing general AI compliance obligations and standards.
- ☐ Barring AI use in critical sectors like healthcare and finance.
- ☐ Focusing solely on AI applications in social media.

☒ Correct

The text mentions that 2023 will see the emergence of more general AI regulatory initiatives.

2 In the context of AI-powered job applicant screening, as per the Amazon memo in the reading article [AI Bias: What is it and How to Avoid it](#), which of the following is the best approach to ensure the robustness of the system despite Amazon's decision to abandon AI-powered job applicant screening?

- ☐ Train the system on data from a specific group of job seekers and apply it to similar applicants only.
- ☐ Train the system on data from a specific group of job seekers and apply it to all applicants regardless of their representation in the training data.
- ☐ Train the system on data from a specific group of job seekers and do not use the algorithm in real-world scenarios.
- ☐ Do not use AI for job applicant screening due to potential biases.

☒ **Correct**

This approach ensures that the AI system's predictions are reliable and fair, as it avoids potential biases that could arise when the system is applied to applicants who are not represented in the training data.

According to the reading article [Proposed EU legislation to disclose AI company data could increase privacy lawsuits](#) what is a potential impact of the proposed EU legislation to regulate AI on the AI industry?

- ☒ The legislation could force companies to disclose the data used to create their software.
- ☐ The legislation could allow companies to use any data without disclosure.
- ☐ The legislation could prevent companies from using any data to create their software.
- ☐ The legislation could encourage companies to use copyrighted data without permission.

☒ **Correct**

The proposed EU legislation to regulate AI aims to set clear and harmonized rules for the use of AI, which includes obligations for businesses to disclose the data used to train their AI systems. This is intended to enhance trust and confidence in AI, both among users and consumers, and among public authorities and regulators.

What was the central question of artificial intelligence (AI) that Alan Turing proposed in the 1950s, according to [Lowe, Anthonysen, and Henderski](#) (2017)?

- ☐ Can machines think?
- ☐ Can a computer imitate intelligent behavior well enough to convince someone they are talking to a human?
- ☐ Can machines define what it means to think?
- ☒ Can a computer convince someone they are talking to a human without imitating intelligent behavior?

Incorrect

This is incorrect because the Turing test involves a computer imitating intelligent behavior to convince someone they are talking to a human, not convincing someone without imitating intelligent behavior.

3. According to the PowerPoint slides for Module II, what is a primary goal of AI ethics as described by IBM?

1 / 1 point

- ☐ To create the most advanced AI technologies.
- ☒ To optimize AI's beneficial impact while minimizing risks and adverse outcomes.
- ☐ To ensure that AI technologies are only developed in economically advanced countries.
- ☐ To promote the exclusive use of AI in military applications.

☒ Correct

According to IBM, AI ethics focuses on optimizing the beneficial impacts of AI and reducing risks and adverse outcomes, ensuring that the technology is developed and used responsibly.

What is a key strategy of the United States to remove barriers to AI innovation according to the reading article <https://www.eurobarometer.europa.eu/en/ai>?

- ☒ Reduce barriers to the safe development, testing, deployment, and adoption of AI technologies by providing guidelines for the governance of AI and driving the development of appropriate AI technical standards
- ☐ Increase barriers to the development, testing, deployment, and adoption of AI technologies to ensure safety and security
- ☐ Reduce barriers to the development, testing, deployment, and adoption of AI technologies without providing any guidance for the governance of AI
- ☐ Provide guidance for the governance of AI without reducing any barriers to the development, testing, deployment, and adoption of AI technologies

☒ **Correct**
According to the American AI Initiative, a key strategy of the United States to remove barriers to AI innovation is to reduce barriers to the safe development, testing, deployment, and adoption of AI technologies by providing guidance for the governance of AI and driving the development of appropriate AI technical standards.

7. According to the reading article [The Global Expansion of AI Surveillance](#), a good approach to address the challenges posed by the global expansion of AI surveillance is to:

- ☒ establish robust regulatory frameworks to ensure accountability and protect individual rights.
- ☐ increase the deployment of AI surveillance technologies for enhanced security.
- ☐ limit international collaboration in AI research to control surveillance proliferation.
- ☐ reduce public awareness of AI surveillance to mitigate concerns.

☒ Correct

The article "The Global Expansion of AI Surveillance" suggests addressing the challenges posed by the global expansion of AI surveillance by establishing robust regulatory frameworks that ensure accountability and protect individual rights.

What is a key aspect of the United States' strategy to unleash AI-resources according to the reading article *American AI initiative annual report*?

☒ Enhance access to high-quality Federal data, models, and computing resources to increase their value for AI R&D, while maintaining and extending safety, security, privacy, and confidentiality protections

☐ Limit access to Federal data, models, and computing resources to prevent their use in AI R&D

☐ Unleash access to Federal data, models, and computing resources without considering safety, security, privacy, and confidentiality protections

☐ Discourage Federal agencies from identifying new opportunities to increase access to and use of Federal data and models

☒ **Correct**
According to the *American AI Initiative*, a key aspect of the United States' strategy to unleash AI-resources is to enhance access to high-quality Federal data, models, and computing resources to increase their value for AI research and development (R&D), while maintaining and extending safety, security, privacy, and confidentiality protections.

Which of the following reasons can be inferred from the Decision-Making slides for Module 8, in the context of machine learning, as to why excluding race from the point-based algorithms does not guarantee unbiased outcomes?

- ☒ Algorithms may infer race from correlated variables.
- ☐ Race data exclusion makes algorithms less complex.
- ☐ Excluding race data fully anonymizes the input data.
- ☐ Race exclusion guarantees compliance with international laws.

☒ **Correct**

Machine learning algorithms can deduce or approximate race from other variables that are closely correlated with racial demographics, such as postal codes, shopping habits, or even names. This correlation can inadvertently reintroduce racial bias into the decision-making process.

10 According to the reading article [The Global Expansion of Surveillance](#), what does AI Global Surveillance (AGS) index reveal about the major suppliers of AI surveillance technology worldwide?

☐ Most AI surveillance technology is supplied by a diverse range of small companies globally.

☐ The largest supplier of AI surveillance technology is from the United States.

☒ Chinese companies like Huawei, Hikvision, Dahua, and ZTE are the predominant suppliers in many countries.

☐ European countries are the leading suppliers of AI surveillance technology.

☒ **Correct**

The index highlights that these Chinese companies are major suppliers, with Huawei alone responsible for AI surveillance technology in fifty countries, more than any other single company.

11 According to [The Ethics and Governance of Generative AI](#) [5], what is the goal of Seattle's interim policy regarding AI software procurement?

☐ To avoid any regulations on AI software procurement.

☒ To ensure all AI software, even free or pilot products, undergoes city approval.

☐ To promote the use of AI without oversight from any city departments.

☐ To delegate all AI related decisions to external vendors.

☒ **Correct**
The policy mandates a rigorous procurement process for all software, including free or pilot products, **highlighting a commitment to provide audit trail evidence.**

According to the reading article "Can We Make Moral Judgments Just Based On It?" Psychology Today [5], what is the primary function of the Delphi model of moral reasoning in the ethical acceptability of different scenarios.

☐ Delphi is a natural language processing model that can only respond to free-form questions.

☐ Delphi is a natural language processing model that can only make a morally preferable choice between two options.

☒ Delphi is a natural language processing model trained on a large dataset of human language samples to analyze ethical evaluations, respond to free form questions, asportions of moral judgment, and make a morally preferable choice between two options.

☐ Delphi is a natural language processing model that can only distinguish between the ethical acceptability of different scenarios.

☒ Correct

12 According to the article [Anthropomorphic AI Awakens](#), what future potential does anthropomorphic AI hold?

☐ It could become a threat to human existence soon.

☐ It has limited use beyond theoretical applications.

☒ It will revolutionise industries such as healthcare and education.

☐ It will diminish the need for human emotional intelligence.

Correct

The article highlights the promising future of anthropomorphic AI, particularly in how it can enhance healthcare and education through personalised interactions.

What is the primary focus of Boston's interim guidelines on generative AI in 1/3 points

The Ethics and Governance of Generative AI (2024)?

- ☐ To promote the unrestricted use of generative AI in all city operations.
- ☒ To ensure responsible experimentation with generative AI by city staff.
- ☐ To mandate the replacement of human decision-making with AI.
- ☐ To increase the sharing of sensitive information through AI systems.

☒ **Correct**

The guidelines focus on responsible experimentation, including fact-checking, disclosure of AI use in communications, and non-disclosure of sensitive information.

15. According to the reading article [How Anthropomorphism Drives AI Education](#) ¹⁷, what is the term "anthropomorphism" regularly discussed in the context of developing Experience AI lessons?

☐ Anthropomorphism is encouraged to make AI and ML concepts more reliable to learners.

☒ Anthropomorphism is avoided to prevent learners from developing misconceptions about machines being human-like in their abilities.

☐ Anthropomorphism is a technique used to make machines more human-like in their abilities.

☐ Anthropomorphism is a new concept in AI and ML, that learners need to understand.

☒ Correct
