Your lowest: 100% • Your highest: 100% • To pass you need at least 80%. We keep your highest score.

Instructions

1.

According to the reading [Nvidia's Hardware is Laying the Groundwork](#), what is the main reason behind Nvidia's recent success in the technology industry?

1 / 1 point
- ☐ Their focus on developing high-end gaming graphics cards.

☐ Their pioneering work in virtual reality (VR) technology.

☒ The increasing demand for powerful hardware for artificial intelligence (AI) applications.

☐ Their recent acquisition of a major chip manufacturer.

Correct
2.

According to the article [Machine Learning Knowledge](#), what is the main difference between traditional programming and machine learning?

1 / 1 point
- ☐ Traditional programming is faster and more efficient than machine learning algorithms.

☐ Machine learning algorithms are only used for complex scientific calculations, while traditional programming handles everyday tasks.

☐ Machine learning algorithms are much more difficult to create than traditional programs.

☒ Traditional programming requires writing detailed instructions for every step, whereas machine learning algorithms can learn from data and experience.

Correct
3.

According to the PowerPoint slides for Module 2, which statement below accurately describes the relationship among AI, machine learning, and deep learning?

1 / 1 point
- ☐ AI is a subset of machine learning, which in turn includes deep learning as its primary technique.

☐ Machine learning encompasses AI and deep learning, with AI focusing on hand-coded algorithms.

☒ AI encompasses machine learning and other knowledge, while machine learning includes deep learning as one of its techniques.

☐ Deep learning is a subset of AI, which includes machine learning techniques but also extends to hand-coded algorithms.

Correct
4.

According to the reading [The Convergence will be a Powerful Force in 2024](#), which of the following statements is NOT true about the convergence of these technologies?

1 / 1 point
- ☒ It allows for less efficient data analysis due to real-time processing capabilities.

☐ Security concerns might arise as more devices and data points become interconnected.

☐ This convergence results in advancements in artificial intelligence.

☐ The convergence may eventually reduce the need for traditional data centers.

Correct

This statement is NOT true. The convergence of AI, edge computing, and machine learning actually improves data analysis efficiency due to real-time processing capabilities, rather than reducing efficiency.
5.

According to the PowerPoint slides for Module 3, how does the integration of AI with Elastic Cloud computing primarily benefit businesses?

1 / 1 point
- ☐ It increases the physical security of business data.

☐ It significantly reduces the need for human intervention in operations.

☒ It enables more agile and innovative operations by leveraging AI-driven insights.

☐ It focuses solely on reducing operational costs.

Correct
6.

According to the reading article [AI Capabilities List](#), which of the following capabilities allow AI systems to automate routine, manual, and repetitive tasks?

1 / 1 point
- ☐ Machine Learning

☐ Natural Language Processing

☐ Computer Vision

☒ Robotic Process Automation

Correct

Robotic Process Automation is explicitly mentioned as automating routine, manual, and repetitive tasks. The text states that RPA involves the use of AI-powered bots or "robots" to automate these types of tasks, thereby improving operational efficiency and productivity, making it the correct answer.
7.

The reading article [AI-Based Process Use Cases in the Enterprise Today](#) mentions that AI is being used in enterprises to

1 / 1 point
- ☐ Eliminate the need for data security measures.

☒ Alleviate some of the burden on service representatives and call centers.

☐ Creatively brainstorm new product ideas for marketing campaigns.

☐ Perform tasks that require strict adherence to safety protocols.

Correct
8.

According to the reading article [Everyday AI: Chatbots Are Revolutionizing How We Live and Work Today](#), where are chatbots deployed?

1 / 1 point
- ☐ Only in e-commerce.

☐ Solely in healthcare.

☐ Exclusively in finance.

☒ In industries such as e-commerce, healthcare, and finance.

Correct
9.

The reading article [AI-Based AI Tools: 5 Concerns and Top 3 Hopes](#) relies on which of the following to help understand AI in 2024?

1 / 1 point
- ☐ By only highlighting concerns.

☐ By disregarding ethical implications.

☒ By providing insights into both concerns and hopes.

☐ By overrating AI's capabilities.

Correct
10.

According to the PowerPoint slides for Module 6, which of the following is a primary benefit of integrating artificial intelligence into financial services?

1 / 1 point
- ☐ Reducing the frequency of human-client interactions to lower customer satisfaction.

☐ Allowing customers to engage in complex financial negotiations directly with AI systems.

☒ Enhancing risk management and investment personalization through robust advisors.

☐ Increasing the use of paper-based processes to ensure regulatory compliance.

Correct

AI enhances customer service through automated bots, offers reliable investment services with robust advisors, increases efficiency by reducing paperwork, and improves financial security by identifying potential illegal access points and preventing financial crimes.
11.

What does the article [How Countries can build an effective AI strategy](#) suggest about the role of international collaboration in AI development?

1 / 1 point
- ☐ It is unnecessary for effective AI strategy.

☐ It hinders AI innovation.

☐ It is the sole responsibility of individual nations.

☒ It is essential for ensuring that AI advancements benefit global society.

Correct

It is essential for ensuring that AI advancements benefit global society.Correct
12.

What potential risk should users be aware of when using generative AI tools for code generation in [How to Experiment with Generative AI](#)?

1 / 1 point
- ☒ AI-generated computer code may contain security vulnerabilities.

☐ AI code generation eliminates the need for human review.

☐ AI-generated code does not contain errors.

☐ AI-generated code does not require debugging.

Correct

The article points out that AI-generated code can have security vulnerabilities, so users should always review it before publication.
13.

How can generative AI tools aid in improving accessibility in [Ideas for Experimentation with Generative AI](#)?

1 / 1 point
- ☐ By improving traditional translation methods.

☒ By identifying problems in documents and suggesting improvements like alt text and audio descriptions.

☐ By creating comprehensive research papers.

☐ By removing all potential errors in documents.

Correct

The article suggests that generative AI tools can help improve accessibility by identifying and suggesting alt text and audio descriptions.
14.

What is a potential risk when humans ascribe more objectivity to machine learning tools than to other sources as discussed in the reading article [Human-AI Bias: Risks, Realities, and Solutions](#)?

1 / 1 point
- ☒ People may attribute more authority to AI and make more mistakes that mimic the AI's bias.

☐ People may attribute less authority to AI and make fewer mistakes that mimic the AI's bias.

☐ People may attribute more authority to AI and make fewer mistakes that mimic the AI's bias.

☐ People may attribute less authority to AI and make more mistakes that mimic the AI's bias.

Correct

The article "Human-AI Bias: Risks from AI" discusses how people who interact with biased AI systems can unconsciously incorporate the skew they encounter into their own future decision-making.
15.

According to the reading article titled [How Can AI Improve Federal Support](#), what is a key strategy of the United States to improve the provision and efficiency of government services using artificial intelligence (AI)?

1 / 1 point
- ☒ The General Services Administration established an AI Center of Excellence to enable Federal agencies to determine best practices for incorporating AI into their organizations.

☐ The General Services Administration discouraged Federal agencies from incorporating AI into their organizations.

☐ The General Services Administration established an AI Center of Excellence to discourage the use of AI in Federal agencies.

☐ The General Services Administration has no role in enabling Federal agencies to incorporate AI into their organizations.

Correct

The AI Center of Excellence, established by the General Services Administration, works to help agencies leverage AI technologies, providing strategic tools and infrastructure support to rapidly discover use cases, identify applicable artificial intelligence methods, and deploy scalable solutions across the enterprise.
