📄 Introduction

Review Learning Objectives

1. What is the primary purpose of the input in this learning?

☐

To increase the network's ability to learn from noisy data.

☒

To prevent overfitting by adding noise to the training data.

☐

To enhance the network's ability to memorize training data.

☐

To remove the input of irrelevant data and only keep the relevant data.

Correct

Incorrect

Incorrect

Score: 10/10 (100%)

2. How does changing the network's input affect the output in an RNN?

☐

It has no effect on the output.

☒

It changes the output significantly.

☐

It only changes the output if the activation function is nonlinear.

☐

It only changes the output if the network is overfitted.
