Post grade

1. What is the primary intuition behind diffusion models? **1 / 1 point**

- To directly generate images from noise.
- To compress images for efficient storage.
- To iteratively add and remove noise from data.
- To classify images into different categories.

2. What role does the parameter β_t play in the training of diffusion models? **1 / 1 point**

- Specifies the current step in the noise addition or removal process.
- Measures the similarity between the generated and real images
- Determines the resolution of the generated images.
- Controls the color saturation of the generated images.
