Self-attention Quiz

Review Learning Objectives

Instructions

1. What is the primary input to the self-attention mechanism? 1 / 1 point

- A set of vectors
- A fixed-size tensor
- A matrix of embeddings
- A single scalar value

Correct
Correct!

2. How does self-attention determine relevance between parts of the input? 1 / 1 point

- By applying a convolution operation
- Through sequential processing of input
- Using dot-product calculations between vectors
- Through a fixed hierarchical structure

Like Dislike Report an issue

Correct
Correct!

3. What problem does positional encoding solve in the context of self-attention? 1 / 1 point

- It increases the computational efficiency of the model.
- It introduces a sense of order in the input data.
- It adds non-linearity to the model.
- It enables the model to process variable-length inputs.

Correct
Correct!
