1. Which component of the Transformer model is primarily responsible for generating the output sequence? 1 / 1 point

- The Encoder
- Self-Attention Layer
- The Decoder
- Positional Encoding

2. In the Transformer model, how is the 'attention weight' between two tokens computed? 1 / 1 point

- By adding the embeddings of the tokens.
- By multiplying the tokens' embeddings.
- By calculating the dot product of the 'Query' and 'Key' followed by a softmax function.
- By applying a max-pooling operation over the embeddings.
