coach

Almost there! Let's review your answers and then try again.

Your work showed skill in understanding the roles of components in autoencoders and GANs, as well as in cloning GitHub repositories. However, there is room for growth in evaluating recommender systems. Before retrying this assignment, we recommend focusing on this key area:

- **Recommender Systems (101):** In Question 1, your understanding of the methods to evaluate the performance of a recommender system was incomplete. Try reviewing [this item](#) to refresh your memory.

Good job.

Retry assignment

1. Which of the following are methods to evaluate the performance of a recommender system?

0.8 / 1 point

- ☐ Root Mean Squared Error (RMSE)
- ☒ Recall at K

👍 Correct
Correct! Recall at K is widely used to evaluate recommender systems.

- ☒ Precision at K
- 👍 Correct
Correct! Precision at K is a common evaluation metric for recommender systems.

- ☐ Gradient Descent
- ☐ Collaborative Filtering

You didn't select all the correct answers

2. Which command would you use to clone the GitHub repository containing the supporting files for the course?

1 / 1 point

- ☐ git pull https://github.com/example/repo.git
- ☐ git copy https://github.com/example/repo.git
- ☐ git fetch https://github.com/example/repo.git
- ☒ git clone https://github.com/example/repo.git

👍 Correct
Correct! This is the standard command to clone a GitHub repository.

3. Which component of an autoencoder is responsible for reconstructing the input data?

1 / 1 point

- ☒ Decoder
- ☐ Activation function
- ☐ Encoder
- ☐ Loss function

👍 Correct
Correct! The decoder part of an autoencoder reconstructs the input data from the encoded representation.

4. What is the main role of the generator in a Generative Adversarial Network (GAN)?

1 / 1 point

- ☒ To create fake data that is indistinguishable from real data
- ☐ To classify data as real or fake
- ☐ To preprocess the input data before training
- ☐ To optimize the loss function of the GAN

👍 Correct
Correct! The generator's main role is to create fake data that is as close as possible to the real data, fooling the discriminator.

5. What steps are involved in setting up classes for the discriminator and generator in a GAN?

1 / 1 point

- ☒ Creating the loss functions

👍 Correct
Correct. Loss functions are crucial for training both the generator and the discriminator.

- ☒ Defining the network architecture

👍 Correct
Correct. Defining the architecture is essential for both the generator and discriminator.

- ☒ Implementing forward propagation

👍 Correct
Correct. Forward propagation must be implemented to pass data through the network.

- ☐ Data augmentation
- ☐ Preprocessing the input data
