

Global Historical Climatology Network daily (GHCNd)

The Global Historical Climatology Network daily (GHCNd) is an integrated database of daily climate summaries from land surface stations across the globe. GHCNd is made up of daily climate records from numerous sources that have been integrated and subjected to a common suite of quality assurance reviews.

GHCNd contains records from more than 100,000 stations in 180 countries and territories. NCEI provides numerous daily variables, including maximum and minimum temperature, total daily precipitation, snowfall, and snow depth. About half the stations only report precipitation. Both record length and period of record vary by station and cover intervals ranging from less than a year to more than 175 years.

Available Data

Daily data from GHCN are available as individual ASCII (i.e., plain text) files (one file per station) and as a GZIP-compressed TAR file containing all of the station files. Please read the GHCNd readme file for details on the files available and for a description of the data format.

Access Methods

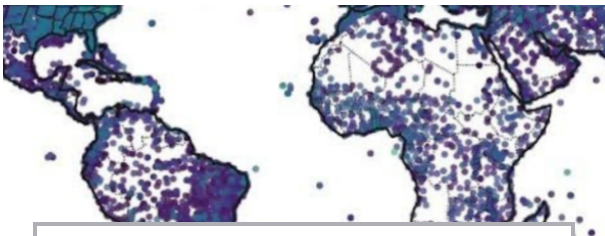

- [HTTPS](#)
- [Climate Data Online](#)

To determine off-line availability of any country's data, please contact NCEI at ncei.orders@noaa.gov or 828-271-4800.

Metadata–Inventories

- [Stations](#): Station ID, latitude, longitude, elevation, State (if applicable), and Station name
- [Inventory](#): Station ID, latitude, longitude, element type, and begin/end date
- [Documentation](#): Data format, element definitions, and Station variables
- [Country Codes](#): List of country codes used in the Station inventory
