Visualization of Daily Temperature (average) at Ann Arbor Michigan 2005-2014 vs. 2015: Is the climate getting more extreme?

Submitted on September 8, 2024

Shareable Link

PROMPT

Upload an image of your record highs and lows plot. Ensure that your plot includes the following elements:

- an accurate title
- correctly labelled axes
- line graph displaying record highs and lows for 2005-2014
- shaded area between the two lines
- overlaid scatter plot indicates days in 2015 that broke a record high or low for 2005-2014
- a legend or sufficient labelling for the line graph and scatter plot

RUBRIC

Did the learner upload an image of their record highs and lows plot? *Note: Not everyone received the same data, so your plot may look different from your peer's assignment.*

- 0 points
No, the learner did not upload an image of their record highs and lows plot.
- 1 point
Yes, the learner uploaded an image of their record highs and lows plot.

Does the plot include an accurate title?

- 0 points
No, the plot does not include an accurate title.
- 1 point
Yes, the plot does include an accurate title.

Does the line graph display record highs and lows for 2005-2014?

- 0 points
No, the line graph does not display record highs and lows for 2005-2014.
- 3 points
Yes, the line graph does display record highs and lows for 2005-2014.

Is the area between the two line graphs shaded?

- 0 points
No, the area between the two lines is not shaded.
- 3 points
Yes, the area between the two lines is shaded.

Does the overlaid scatter plot indicate days in 2015 that broke a record high or low for 2005-2014?

- 0 points
No, the overlaid scatter plot does not indicate days in 2015 that broke a record high or low for 2005-2014.
- 3 points
Yes, the overlaid scatter plot indicates days in 2015 that broke a record high or low for 2005-2014.

Is there a legend or sufficient labelling for the line graph and scatter plot?

- 0 points
No, there is not a legend or sufficient labelling for the line graph and scatter plot.
- 2 points
Yes, there is a legend or sufficient labelling for the line graph and scatter plot.

PROMPT

Describe how your visual leverages the guidelines of effective visual design outlined in module one of this course.

Guidelines of Effective Visual Design:

- Clarity and Simplicity: Avoid clutter, only include essential elements. Minimize chart junk: Avoid unnecessary lines, gridlines, colors, or 3D effects that don't add value.
- Use of Colors: Consistent color scheme: Use a limited palette that highlights important data without overwhelming the viewer.
- Use color to differentiate: Ensure that colors represent distinct categories or groups clearly (here different colors are used to plot the average max and min temperatures in 2005-2014, and different colors are used to plot the extreme points for 2015. For example, to indicate low temperatures blue-white colors are used and to indicate high temperature orange-red colors are used, which sort of creates color code for the data).
- Accessibility: Use color-blind friendly palettes, as certain color combinations can be indistinguishable for some viewers.
- Proper Use of Labels and Legends: Clear labels: Axis labels, titles, and legends should be descriptive, concise, and easy to read (here all the guidelines are followed, the python libraries `matplotlib` along with `seaborn` is used for visualization purposes)
- Appropriate Data-to-Ink Ratio: Ensure that most of the space is used to display the actual data, minimizing excessive decorative elements.

RUBRIC

The visual leverages the guidelines of effective visual design outlined in module one of this course, specifically, Cairo's principles of beauty, truthfulness, functionality, and insightfulness.

- 0 points
Disagree. The visual does not leverage any of the guidelines given for effective visual design (e.g., beauty, truthfulness, functionality, and insightfulness).
- 1 point
Neutral. The visual leverages only one or two guidelines given for effective visual design (e.g., beauty, truthfulness, functionality, and insightfulness).
- 2 points
Agree. The visual effectively leverages the guidelines given for effective visual design (e.g., beauty, truthfulness, functionality, and insightfulness).

Based on your response to the previous question, provide comments about one aspect of the plot that was especially effective and provide suggestions about how one aspect of the plot that could be improved.

Excellent work
