g to showcase is the scatter plot.

dule we can create some dummy data to visualize the change in gradient.

```
"#D4CC47"
"#7C4D8B"
s = 2000

e(figsize=(15,5))
er(np.linspace(0,100,num_points), np.random.rand(num_points), color=get_color_gradie
, color2, num_points))
:("Gradient Scatter")
)
```

ook and try out different gradients for yourself.

released under the [Apache 2.0](#) open source license.
