

5 reasons to keep going

Information changes everything.

Congrats + 5 reasons to keep going in Data Science with Python

Hello again!

Congratulations on completing Course 2 in the University of Michigan's Applied Data Science with Python Specialization on Coursera.

Here are 5 reasons to keep going:

1. **You're already 40% done with this specialization!** (Assuming you're working the courses in order.)
2. **You're about to meet some great new experts.** In the next courses, you'll learn from several more University of Michigan faculty members with unique specialties and expertise.
3. **Just ahead: Machine learning.** The very next course deals with one of the hottest areas of applied data science.
4. **You'll want the hands-on experience.** Hands-on projects give you real-world experience (and often a new tool you can put to work immediately).
5. **You might be discovering your next career move.**

I previously mentioned that this specialization could be your first step toward a **University of Michigan master's degree**. Completing this specialization will help you feel more confident about your data science skills – and it will also qualify you for an **application fee waiver** for the University of Michigan Master of Applied Data Science (MADS) program.
