1. Which of the following statements regarding rational agents are true? Select all that apply. **1 / 1 point**

- [x] A rational agent is not guaranteed to find optimal solutions.

Correct
Rational agent makes actions based on its perceptions, but sometimes the environment is not fully observable.

- [x] A rational agent selects an action that maximizes the expected value of its performance measure.

Correct
Definition of rational agent

- [ ] An agent program is the same as an agent function.
- [x] Touchless faucets can also be viewed as agents.

Correct
Touchless faucet has sensors and actuators, which can be viewed as a reflex agent.

2. What does a rational agent maximize? **1 / 1 point**

- ( ) Actual performance
- ( ) Autonomy
- (•) Expected performance
- ( ) Monetary value

Correct
See the definition from the video: Rationality maximizes expected performance, while perfection maximizes actual performance.

3. Which of the following statements about agents are true? Select all that apply. **1 / 1 point**

- [x] Percepts are the agent's perceptual inputs from the environment at any given time.

Correct
This statement is true.

- [ ] Eyes and ears are examples of a human agent's actuators.
- [ ] An agent senses its environment through perceptors.
- [ ] Human and robot agents differ because the latter do not have actuators.
