Download and Install MATLAB

Getting MATLAB

You'll get lots of hands-on practice using MATLAB in this specialization. Follow the steps below to install MATLAB and get started. Even if you already have MATLAB, we recommend using the free license. This specialization will use new functionality that may not be present in older versions of MATLAB. Also, the license includes commonly used toolboxes for image processing and computer vision. If you follow the recommended schedule, the license will last for the duration of the specialization.

1. If you do not already have a MathWorks account, create one here:
<https://www.mathworks.com/mwaccount/register>. Be sure to verify your email (check your Junk/Spam folders) before moving on to step 2.
2. [Click here to go to the license page](#) for this course and download the installer.
3. Run the installer using the default options. If you run into trouble, post the steps you took and the error message you received in the forums. A screenshot is often helpful.
