Prerequisite Knowledge

We assume you are familiar with common image processing techniques in this specialization. If you're new to working with images, don't worry! We have an [Image Processing for Engineering and Science](#) specialization as well. We recommend you start with Image Processing and then come back to this specialization.

If you have some previous background with image processing, below lists some of the topics that appear in this specialization.

- Converting between image data types
- Working with image datastores
- Segmenting grayscale and color images
- Refining segmentation with morphology
- Working with video files

Consider enrolling in [Image Processing for Engineering and Science](#) for a refresher on these topics and to learn the latest approaches in MATLAB.
