The Upcoming Assessments

Congratulations on reaching the end of the module! Over the following two quizzes, you'll complete a small project described below.

An image dataset titled **Roadside Ground Cover** is provided in the "Data/MathWorks Images/Roadside Ground Cover" folder of the course files. The images are organized into two subfolders: "Snow" and "No Snow." Here are some example images from each category:

Snow

No Snow

For the first quiz, you'll follow the machine learning workflow to prepare your images for classification and extract "mean saturation" and "standard deviation of saturation" as predictor features. In the following quiz, you'll develop a model in MATLAB that classifies these images as having or not having snow.

You can attempt these quizzes an unlimited number of times, so we strongly encourage you to submit this quiz after each question to confirm your progress at each step.
