Beginning the Wood Knots Detection Project

To complete this project, you'll use a live script prepared for you in the course files. This script is similar to what was covered in the video "Object Detection with Machine Learning" but has been updated to use the wood knots dataset for this project.

To begin, navigate to the Module 4 folder and open the file `WoodKnotsDetectionProject.mlx` in MATLAB.

Follow the instructions there, and when prompted, answer the questions in the quizzes here on Coursera.

✓ **Completed**
