

Using Pre-trained Deep Learning Models

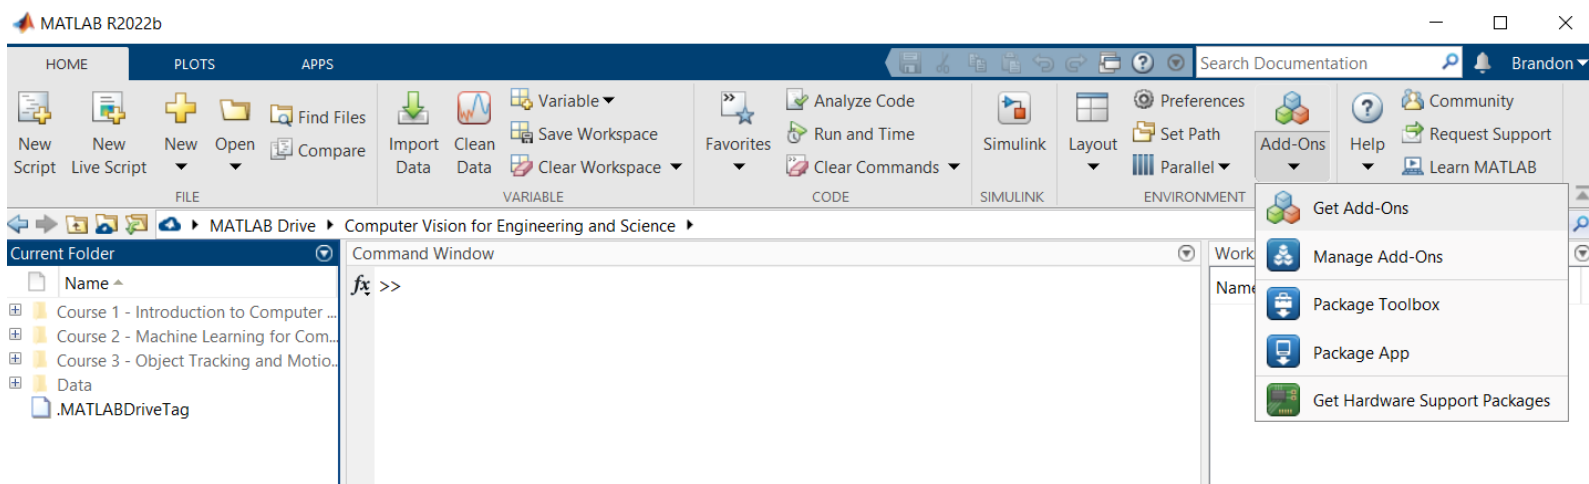

- 1. Follow the instructions below to install the YOLO version 4 object detection model.
- 2. Open the `detectObjectsWithDeepLearning.mlx` file included with the course to use a deep learning model to detect objects.

Accessing Pre-trained models

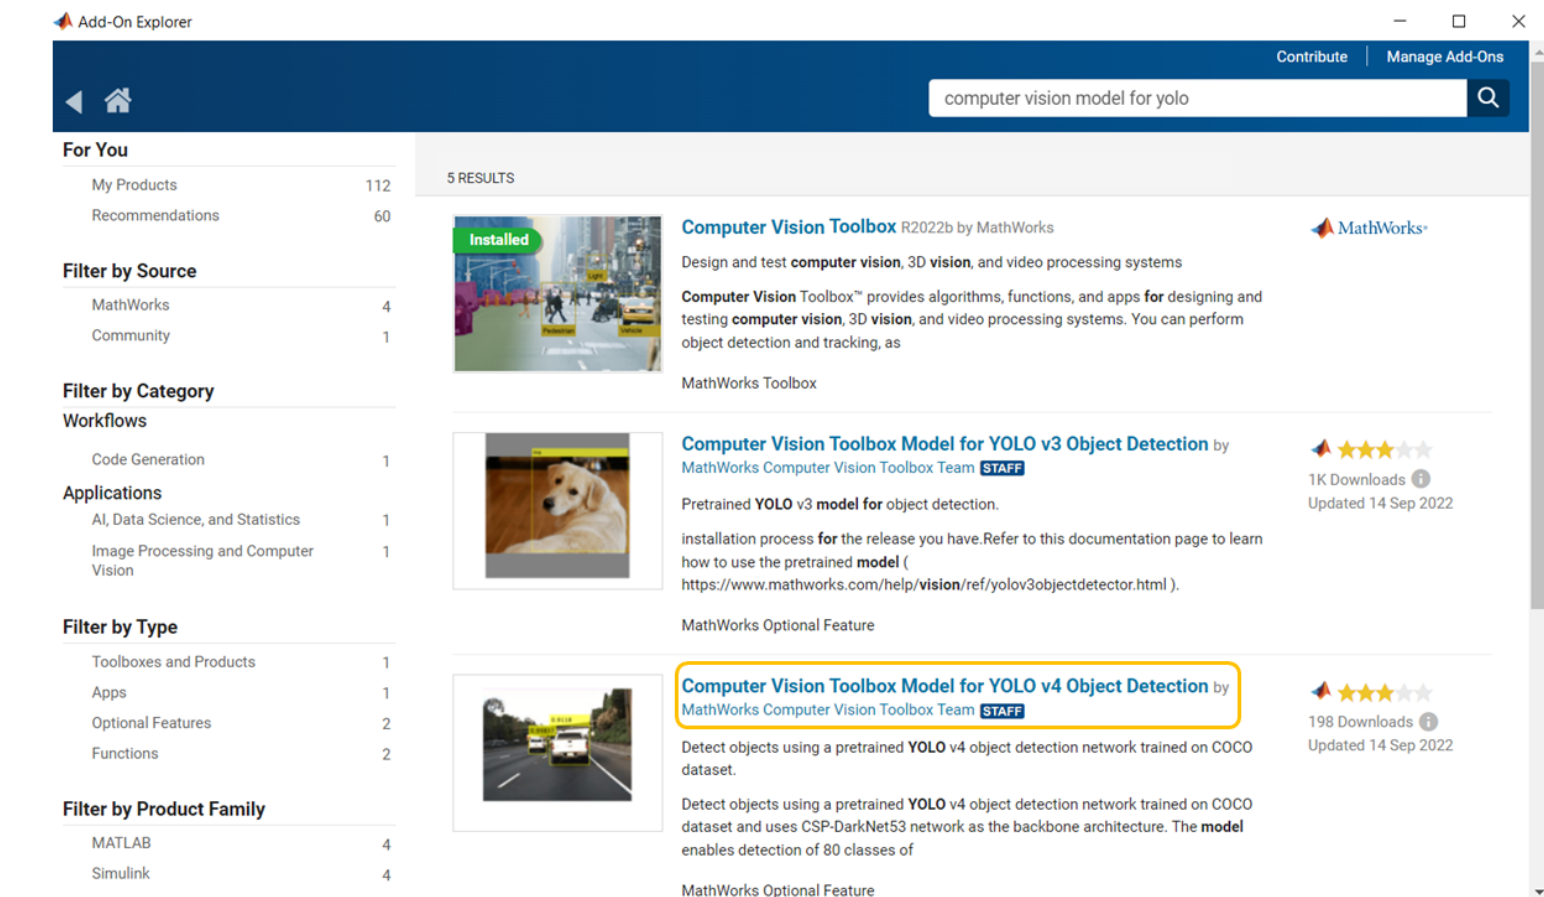

Some special-purpose detectors are included in MATLAB, like the YOLO vehicle detector shown in the video. Larger, more general models are listed on the [MATLAB Deep-Learning Model Hub](#).

Installing a deep-learning model

- Use the **Add-On Manager in MATLAB** to install a model listed on the MATLAB Deep-Learning Model. The Add-On Manager is located in the Home tab, as shown below.

- Search for "**Computer Vision model for yolo.**" You will see something like the image below. You may need to scroll or Filter by Source for MathWorks.

- Select the **Computer Vision Toolbox Model for YOLO v4 Object Detection** created by MathWorks.
- Follow the instructions to install the model.
